There has been much public praise for the Bill and Melinda Gates Foundation's efforts to reform public education. However, few scholars have engaged substantively and critically with the organization's work. While the Gates Foundation is the single largest supporter by far of "choice" initiatives particularly with regard to charter school formation, it is pushing public school privatization through a wide array of initiatives and in conjunction with a number of other foundations. What are the implications for a public system as control over educational policy and priority is concentrated under one of the richest people on the planet in ways that foster de-unionization and teacher de-skilling while homogenizing school models and curriculum? The Gates Foundation and the Future of US "Public" Schools addresses this crucial, unanswered question while investigating the relationships between the Gates Foundation and other think tanks, government, and corporate institutions.

Hoosiers and Scrubby Dutch, Second Edition: St. Louis's South Side Lippincott Williams & Wilkins

The collective, inclusive, and intersectional framework used in this book speaks to the significance of understanding aging across diverse cultures from multiple perspectives, but still as a shared human experience. The underlying message of the book is that although we are unique and different in our aging processes, we are ultimately connected through this physical, mental and spiritual experience of aging. Thus, regardless of whether we are service providers, service recipients, educators or merely fellow human beings, it is important that we approach the aging experience through a collective lens for discovering and sharing resources as we age; honoring the past while simultaneously accepting that the future is here. A few select examples of key findings from this collaborative work are as follows. First, despite progress in the field, certain issues remain to be addressed including the challenges of racism and sexism, mistreatment, the digital divide, poverty, and other social and economic crises in urban and rural communities as they relate to our aging population. Second, the need for sustaining a sense of independence among the aged and interdependence among supportive systems is warranted. Third, our elders continue to benefit from culturally competent services community-based health interventions and social services that

addresses normative and emerging challenges for them. Fourth, spirituality in both indigenous and contemporary perspectives remains important for our elders' development and quality of life. *Central Bank Independence, Regulations, and Monetary Policy* Springer Publishing Company So much to read, so little time? The mortgage bond market had become burdened with subprime loans, most of which were deceitful in their origination and ultimately resulted in delinquencies and foreclosures. Michael Lewis's *The Big Short: Inside the Doomsday Machine* takes the reader behind the scenes, introducing the players and Wall Street institutions that unscrupulously helped fuel the housing bubble as well as the few who, not only foresaw the crash, but placed bets on the outcome. The summary and analysis in this ebook are intended to complement your reading experience and bring you closer to a great work of nonfiction.

This handbook provides librarians and technology specialists with the tools to understand the issues and challenges related to their counterparts' jobs, and find ways to work together for the betterment of all concerned. *School Librarians and the Technology Department: A Practical Guide to Successful Collaboration* was inspired by the authors' collective realization that far too often librarians and technology specialists fail to collaborate successfully, and sometimes even find their groups at odds with one another. This book is the antidote: it is a powerful call to establish and improve relationships between the two for the benefit of the students as well as the librarians and technology specialists themselves. The book begins by providing background information about the history of librarianship and the use of computer technology in schools. The authors trace the origins of the positions related to educational technology, such as "technology specialist," "teacher," and "director." The following chapters describe and address specific concerns of both librarians and technology specialists. Most importantly, this collaborative work offers practical suggestions for cooperation between these two groups of educators as they work together to offer the best possible materials and instructions to students. *School Librarians and the Technology Department* concludes by hypothesizing what the future holds in the realms of librarianship and technology in this rapidly changing information age.

This *Broadside* will look at the changes that can be made to halt the full implementation of the law over the next few years, including repealing parts of the act that are unpopular with members of both parties. These parts are the medical device tax, IPAB, the new 3.8 percent tax on unearned income, to name a few. Also covered will be potential reforms to Medicare and Medicaid, two major entitlement programs that, if not reformed to ensure sustainability for those who really need these programs, will be bankrupt by 2024. There are a number of important lawsuits that will come before the courts this year on issues such as the exchanges, employer and individual mandates, and the contraception mandate. These will be highlighted and their potential impact on the law will be discussed. Finally, there is the issue of defunding the Medicaid expansion and the federal tax subsidies which, unless changed, will add tremendously to the cost of health care in this country. With the current fiscal crisis, these programs must be scaled back. Like welfare reform, the battle to bring about meaningful health care reform is a long-term fight. We must not give up. The election of 2016 will be very important for the future direction of health care. A reform plan will be offered. If

Obamacare is not repealed and replaced, the U.S. will be on the road to a single-payer, "Medicare for All" system such as exists in Canada. We, too, will face long waiting lists, rationed care, and a lack of access to the latest technology and treatments. Examples will be given. America will be on the "Road to Serfdom" and there will be no off-ramp.

Written for an audience that includes private practitioners; counselors working in mental health centers, psychiatric hospitals, employee assistance programs, and other community settings; as well as counselor educators and their students, this helpful guide breaks down the concepts and terminology in the DSM-5 and explains how this diagnostic tool translates to the clinical situations encountered most frequently by counselors. After describing the major structural, philosophical, and diagnostic changes in the DSM-5, the book is organized into four parts, which are grouped by diagnostic similarity and relevance to counselors. American History through American Sports [3 volumes] Routledge

By 1963 public lotteries - a time-honored if tarnished method of raising revenue for everything from the Roman roads to Washington's Continental Army - had been outlawed in the United States for seventy years. The only legal gambling in America was found in Nevada, where mob involvement had at first been an open secret, and then revealed as no secret at all. In New Hampshire - a conservative, rural state with no sales tax and persistent problems with funding education - state legislator Larry Pickett had filed a bill to establish a lottery in every legislative session since 1953. To the surprise of many, it won passage a decade later and was signed into law by John King, the state's first Democratic governor in forty years. American Sweepstakes describes how King assembled an unlikely group of supporters - including a celebrated FBI agent and the staunchly conservative publisher of the state's leading newspaper - to establish the first state lottery in the nation, paving the way for what is today a \$78 billion enterprise. Despite the remonstrations of the Catholic Church, the threat of arrest by the federal government, the strident denunciations of nearly every newspaper editorialist in the country, and the very real fear that the lottery would be co-opted by the mob, eleven thoroughbred racehorses leapt from the gate on September 12, 1964, in the first New Hampshire Sweepstakes, ushering in the lottery age in America.

This book critically engages with how the conservation of tropical rainforests is financed. Beginning with the context of tropical deforestation, alongside an overview of tropical ecology, global environmental policy and finance, the book reviews several conservation financing instruments. These include ecotourism and private reserves, debt-for-nature swaps and government domestic budgetary expenditures for state and national parks. Tropical deforestation and forest degradation are serious global environmental issues, contributing to global climate change, species extinction, and threatening the livelihoods of forest-dependent communities. Yet, many leading companies, individuals and governments are making a positive impact on tropical forest conservation to mitigate greenhouse gas emissions through the use of conservation finance. Conservation of Tropical Rainforests tells the history of international conservation finance and provides a variety of options for individuals, businesses, and governments to support conservation financing projects.

While government enforcement of laws and regulations to control the production of chlorofluorocarbons in 1987 has been hailed as exemplifying the precautionary principle, for almost two decades US companies failed to take precautionary measures to prevent chemical emissions, despite the probable risk of stratospheric ozone loss. As a result, human harms in the form of skin cancer have reached epidemic proportions globally and in the United States where, today, one person dies every hour from skin cancer. This book reviews U.S. laws, regulations, and policies, as well as case law regarding similar toxic tort cases to consider whether companies can and should be

held legally liable under tort common law theories and related tort justice theories for having contributed to increased risks of skin cancer.

This book examines the linkage between central bank structure, central bank autonomy—with respect to setting its monetary policy goals, choosing its policy mechanisms, legal independence, and financial independence—and monetary policy, both in select benchmark countries and at a broader theoretical level. Country-specific chapters on the US, UK, Germany, Greece, Russia, India, China, Japan, Brazil, and South Africa focus on the history, administrative structure, and independence of the central monetary authority in these countries. The chapters go on to explore the countries' conduct of monetary policy, their interplay with political forces and the wider economy, their currency, and their macroeconomic outcomes. The book will appeal to researchers, students of economics, finance and business, as well as general readers with an interest in the subject.

Risk management is a domain of management which comes to the fore in crisis. This book looks at risk management under crisis conditions in the COVID-19 pandemic context. The book synthesizes existing concepts, strategies, approaches and methods of risk management and provides the results of empirical research on risk and risk management during the COVID-19 pandemic. The research outcome was based on the authors' study on 42 enterprises of different sizes in various sectors, and these firms have either been negatively affected by COVID-19 or have thrived successfully under the new conditions of conducting business activities. The analysis looks at both the impact of the COVID-19 pandemic on the selected enterprises and the risk management measures these enterprises had taken in response to the emerging global trends. The book puts together key factors which could have determined the enterprises' failures and successes. The final part of the book reflects on how firms can build resilience in challenging times and suggests a model for business resilience. The comparative analysis will provide useful insights into key strategic approaches of risk management. "In this engaging interdisciplinary investigation, Christina Dunbar-Hester, a leading scholar in the area of democratic control of technologies, focuses on the relationships between commerce, environment, and nonhuman life forms in San Pedro Bay, which houses the contiguous ports of Long Beach and Los Angeles. The harbor is a heavily industrialized area built atop a land- and waterscape that is important for wildlife, containing estuarial wetlands, the LA river mouth, and a marine ecology where colder and warmer Pacific Ocean waters meet. This is a unique spot for industry too--this port complex is amongst the top-ten biggest container ports in the world, and the harbor is also home to major oil operations. Dunbar-Hester, a professor of Science & Technology Studies and Communication at the University of Southern California, centers her account on multispecies life in the period of about 1960 to the present, which coincides with the era of modern environmental regulation in the United States. Focusing on cetaceans, bananas, sea birds, and others whose lives are intertwined with the vitality of the port complex itself, Dunbar-Hester reveals how logistics infrastructure destroys ecologies as it circulates goods and capital--and helps readers to consider a future where the accumulation of life and the accumulation of capital are not in violent tension"--

The Kurds, once marginal in the study of the Middle East and secondary in its international relations, have moved to center stage in recent years. In Turkey, where the Kurdish question is an issue of national significance, and in Iraq, where the gains made by the Kurdistan Regional Government have allowed it to impose its authority, moves are afoot to solve "the Kurdish Question" once and for all. In Syria, where the Kurds have borne the brunt of the Islamic State's onslaught as they defended their three self-declared cantons of Afrin, Kobane, and Cezire, and in Iran, where they struggle to express their cultural distinctiveness and suffer disproportionately at the hands of the Islamic Republic's security and intelligence services, the picture is less positive. Yet the situations in both countries remain in flux, affected by developments in Iraq and Turkey in a manner that suggests we may have to revise the notion of the Kurds being forever divided by the boundaries of the Middle East and subsumed into the state projects of other nations. The contributors to *The Kurdish Question Revisited* offer insights into how this once seemingly intractable, immutable phenomenon is being transformed amid the new political realities of the Middle East.

"The quest for an inclusive and independent state has been at the center of the Palestinian national struggle for a very long time. This book critically reexamines this quest by exploring the meaning of Palestinian statehood and the challenges that face alternative models to it today. Rethinking Statehood in Palestine gives prominence to a young set of diverse Palestinian scholars, both men and women, to show how notions of citizenship, sovereignty, and nationhood are being currently rethought within the broader context of decolonization. Bringing forth critical and multifaceted engagements with what Palestinian self-determination entails within a larger regional context, this groundbreaking book sets the terms of debate for the future of Palestine beyond partition"--

The Patient Protection and Affordable Care Act, which was passed in March 2010, includes provisions to expand the scope of mental health care available to most Americans. What do psychiatrists need to know about the provisions of the health reform law to practice most effectively and best serve their patients? Health Care Reform: A Primer for Psychiatrists is a compilation of resources designed to educate psychiatrists and other mental health professionals about key elements of the reform law. At its core are three articles from a special section on health reform that appeared in the November 2010 issue of *Psychiatric Services*. Each article addresses a key question for the organization and financing of mental health and substance abuse care under health care reform: * How should states set up their health exchanges to ensure that the needs of people with mental illness are addressed? * Will coverage of mental health services be adequate under the law's provisions? * Can integration of mental and physical health care -- a particular focus of health reform -- improve the quality and efficiency of care for people with mental illness? This book also provides a list of additional readings, with links to the source documents. These include "backgrounder" articles published in *Psychiatric News*, analyses and commentaries from the *American Journal of Psychiatry* and *Psychiatric Services*, and white papers and other useful documents compiled by staff of the APA
