Over the past few decades technological advances in transcriptomics, proteomics, metabolomics, and glycomics along with the ability to selectively knockout genes of interest has greatly advanced our understanding of maternal-conceptus interactions that are essential for the establishment and maintenance of a successful pregnancy. This knowledge provides a foundation from which to build research endeavors to help resolve infertility, embryonic loss and recurrent abortion in humans, captive wild animals and important farm species. The present volume on "Regulation of Implantation and Establishment of Pregnancy in Mammals" brings together current reviews from leading experts to address the diversity of mechanisms by which species establish and maintain pregnancy. Implantation in rodents, dogs, pigs, cattle, sheep, horses, primates, humans and embryonic diapause in wild species are discussed. Reviews will provide current knowledge on the role of endometrial steroid receptors, adhesion factors, cytokines, interferons, steroids, prostaglandins, growth factors and immune cells involved with regulation of conceptus development.

A Metric America International Union of Crystallography
This booklet was designed to increase awareness about the metric system. Why the metric system is being used increasingly is described. Pictures illustrate simple comparisons of the most commonly used units of the metric and customary systems. Calculations using both systems are compared through presentation of three problems. Next, everyday units of measurement are listed. Finally, what metric use will mean in the marketplace, in the home, and at work are discussed. (MNS).

Stephen Toulmin argues that the potential for reason to improve our lives has been hampered by a serious imbalance in our pursuit of knowledge. The centuries-old dominance of rationality has diminished the value of reasonableness. Toulmin issues a powerful call to redress the balance between rationality and reasonableness.

Living Standards Measurement Studies Paper 104. The impact of children's health on their schooling success has been the focus of much research. While studies have concluded that there is a correlation between the health of the children and their performance at school, there is an increasing argument surrounding the limitations of the research. Many such studies measure schooling achievement through school attendance rates. This paper analyzes the failure of research to control for the fact that schooling and health are determined simultaneously. Such failure would lead to biased estimates. The study explores the possible biases and provides new evidence on the interrelationship between child health and schooling.

Today, more than ever, the subject of fuels and engines arouses keen interest and provokes lively debate among specialists and the general public. This book describes in extensive detail the new technologies that are currently in use or under development that are designed to provide high-quality fuels and ensure their optimal use in the engines used to power automobiles, trucks, aircraft, and ships. All types of fuels are covered: gasoline, diesel fuels, liquefied petroleum gas, natural gas, biofuels, jet fuels, and fuels for special uses. The specific situations encountered in each region of the world, including the United States, Europe, Japan, and the developing countries, are analyzed and compared, with a focus on energy, economics, and politics. This book is a scientific work, yet easy to read; it is objective, yet actively involved. It is thus an excellent reference work for those seeking pertinent, reliable, and comprehensive information on the subject of fuels and engines.

Direct Alcohol Fuel Cells: Materials, Performance, Durability and Applications begins with an introductory overview of direct alcohol fuel cells (DAFC); it focuses on the main goals and challenges in the areas of materials development, performance, and commercialization. The preparation and the properties of the anodic catalysts used for the oxidation of methanol, higher alcohols, and alcohol tolerant cathodes are then described. The membranes used as proton conductors in DAFC are examined, as well as alkaline membranes, focusing on the electrical conductivity and alcohol permeability. The use of different kinds of carbon materials as catalyst supports, gas diffusion layers, and current collectors in DAFC is also discussed. State of the art of the modeling is used to estimate performance and durability. The closing chapter reviews the use of DAFC in portable equipment and mobile devices and features a detailed discussion on the mechanisms of component degradation which limits their durability. This book is written to facilitate the understanding of DAFC technology, applications, and future challenges. It is an excellent introduction for electrochemical and material engineers interested in small fuel cells as portable energy sources, scientists focused on materials science for energy production and storage, as well as policy-makers in the area of renewable energies.

This translation of a successful German title provides a broad and fundamental overview of current coating technology. Edited by experts from one of the largest research centers for this field in Germany, this valuable reference combines research and industrial perspectives, treated by authors from academia and industry alike. They discuss the potential of the many innovations introduced into industrial application in recent years, allowing materials scientists and engineers to find the appropriate solution

for their own specific coating problems. Thus, with the aid of this book, it is possible to make coating technology an integral part of R&D, construction and production.

Medieval Perceptual Puzzles Springer Science & Business Media
Magnesium alloys with their unique physical and chemical properties are important candidates for many modern engineering applications. Their density, being the lowest of all structural metals, makes them the primary choice in global attempts aimed at reducing the weight of transportation vehicles. However, magnesium also creates challenges at certain stages of raw alloy melting, fabrication of net-shape components and their service. The first one is caused by very high affinity of magnesium to oxygen, which requires protective atmospheres increasing manufacturing cost and heavily contributing to greenhouse gas emissions. The second challenge relates to very high corrosivity of liquid magnesium towards materials it contacts. This imposes restrictions on the selection of materials used to contain, transfer or process molten magnesium during manufacturing operations. A mixture of unique benefits and serious challenges of magnesium alloys in solid and liquid states described here makes the book very useful for a broad audience of scientists and engineers from academia and industry.

Praxiswissen Schweißtechnik Oxford University Press, USA
This book deals with the electron density distribution in molecules and solids as obtained experimentally by X-ray diffraction. It is a comprehensive treatment of the methods involved, and the interpretation of the experimental results in terms of chemical bonding and intermolecular interactions. Inorganic and organic solids, as well as metals, are covered in the chapters dealing with specific systems. As a whole, this monograph is especially appealing because of its broad interface with numerous disciplines. Accurate X-ray diffraction intensities contain fundamental information on the charge distribution in crystals, which can be compared directly with theoretical results, and used to derive other physical properties, such as electrostatic moments, the electrostatic potential and lattice energies, which are accessible by spectroscopic and thermodynamic measurements. Consequently, the work will be of great interest to a broad range of crystallographers and physical scientists.

Urolithiasis is not only one of the most frequently encountered

diseases at urological clinics; it is also the disorder whose treatment has shown the most rapid progress in the past decade. In that period, medicine has experienced a real revolution, characterized by minimally invasive treatments, improvement of the quality of life, and cost-effectiveness in treatment outcomes. In urology, the revolution started with the development of endoscopic retrograde treatment of urolithiasis in the upper urinary tract, which led to development of the percutaneous antegrade maneuver in the latter half of the 1970s. The most remarkable event occurred in 1982, when clinical use of extracorporeal shock wave lithotripsy was introduced by the Munich group, represented by Dr. Christian Chaussy, at the 18th Congress of the International Society of Urology in San Francisco. With the advent of these new strategies, open surgery for urolithiasis has all but disappeared. Today, with the availability of new technology and equipment, guidelines for the treatment of urolithiasis have changed in all developed countries. It is quite

timely that the Meeting of International Consultation on Urolithiasis will be held in Paris in June 2001 to establish international guidelines for urolithiasis. Looking through this textbook for urolithiasis, I was greatly impressed to learn that we have already drawn up some guidelines. The book includes all the updated advances of urolithiasis presented by the most prominent and experienced urologists from all around the world. [Ausführung von Stahlbauten](#) Springer-Verlag
Only a few years ago the endocannabinoid system was unknown. Today we are aware that endocannabinoids are involved in many of the functions of the mammalian body - in neuroprotection, appetite and suckling, pain, reproduction, anxiety, memory, bone formation etc. This volume presents an up-to-date picture of some of the major fields of endocannabinoid research. It summarizes the actions of the endocannabinoids on various physiological systems and opens new therapeutic windows to a large number of

diseases. The first chapter, on the use of Cannabis in India, can be viewed as an expression of thanks to the herbal practitioners, who for centuries passed on the medical traditions associated with the drug. The chapter on chemistry is a short summary of active plant, synthetic and endogenous cannabinoids being investigated today, many of which are mentioned later in the book. Cannabidiol is an unusual cannabinoid - it does not bind to the known receptors and yet exerts a variety of effects. Hence a chapter is devoted to it. Further chapters deal with the endocannabinoid system and the endocannabinoids in a variety of conditions and physiological systems. The concluding chapter describes the research done on Sativex®, a standardized plant extract, shortly to be introduced in Canada as a drug for multiple sclerosis. The intended audience is drug researchers (medicinal chemists, pharmacologists, clinicians), neuroscientists, physiologists, and clinicians interested in the effect of the endocannabinoid system in various physiological systems.
