Germany's Colonial Pasts Harvard University Press

Germany's Colonial Pasts is a wide-ranging study of German colonialism and its legacies. Inspired by Susanne Zantop's landmark book *Colonial Fantasies*, and extending her analyses there, this volume offers new research by scholars from Europe, Africa, and the United States. It also commemorates Zantop's distinguished life and career (1945–2001). Some essays in this volume focus on Germany's formal colonial empire in Africa and the Pacific between 1884 and 1914, while others present material from earlier or later periods such as German emigration before 1884 and colonial discourse in German-ruled Polish lands. Several essays examine Germany's postcolonial era, a complex period that includes the Weimar Republic, Nazi Germany with its renewed colonial obsessions, and the post-1945 era. Particular areas of emphasis include the relationship of anti-Semitism to colonial racism; respectability, sexuality, and cultural hierarchies in the formal empire; Nazi representations of colonialism; and contemporary perceptions of race. The volume's disciplinary reach extends to musicology, religious studies, film, and tourism studies as well as literary analysis and history. These essays demonstrate why modern Germany must confront its colonial and postcolonial pasts, and how those pasts continue to shape the German cultural imagination.

In this whimsical fantasy adventure, a novelist's search for an author takes him to a magical city, a villainous literary scholar, and perilous catacombs.

Optimus Yarnspinner's search for an author's identity takes him to Bookholm—the so-called City of Dreaming Books. On entering its streets, our hero feels as if he has opened the door of a gigantic second-hand bookshop. His nostrils are assailed by clouds of book dust, the stimulating scent of ancient leather, and the tang of printer's ink. Soon, though, Yarnspinner falls into the clutches of the city's evil genius, Pfistomel Smyke, who treacherously maroons him in the labyrinthine catacombs underneath the city, where reading books can be genuinely dangerous . . . In *The City of Dreaming Books*, Walter Moers transports us to a magical world where reading is a remarkable adventure. Only those intrepid souls who are prepared to join Yarnspinner on his perilous journey should read this book. We wish the rest of you a long, safe, unutterably dull, and boring life! Praise for *The City of Dreaming Books* "German author and cartoonist Moers returns to the mythical lost continent of Zamonia in his uproarious third fantasy adventure to be translated into English, a delightfully imaginative mélange of Shel Silverstein zaniness and oddball anthropomorphism à la Terry Pratchett's *Discworld*. . . . A

wonderfully whimsical story that will appeal to readers of all ages.”
 —Publishers Weekly “A salmagundi of whimsy, imagination and book lore—remarkable fun.” —Cleveland Plain Dealer “Moers puts Tolkien through some sort of Willy Wonka sweetening process and comes up with characters such as Optimus Yarnspinner, who, names being fate and all, just has to be a storyteller.” —Kirkus Reviews

This completely revised successor to the *Handbook of Microscopy* supplies in-depth coverage of all imaging technologies from the optical to the electron and scanning techniques. Adopting a twofold approach, the book firstly presents the various technologies as such, before going on to cover the materials class by class, analyzing how the different imaging methods can be successfully applied. It covers the latest developments in techniques, such as in-situ TEM, 3D imaging in TEM and SEM, as well as a broad range of material types,

including metals, alloys, ceramics, polymers, semiconductors, minerals, quasicrystals, amorphous solids, among others. The volumes are divided between methods and applications, making this both a reliable reference and handbook for chemists, physicists, biologists, materials scientists and engineers, as well as graduate students and their lecturers.

 “A fascinating, thoughtful, and accessible account of the emerging field of electromedicine. A timely and eloquent warning on the hazards of electronic pollution.”—Jeremy Rifkin, author of *The Hydrogen Economy* At the same time that exciting insights about electromedicine’s powerful ability to use the body’s inherent healing abilities are emerging, electromagnetic fields radiating from power lines, radar, microwave ovens, VDTs, satellites, radios, and even electric blankets are putting our health at serious risk. Researchers are finding that this radiation correlates with increases in cancer, birth defects, depression, learning disabilities, chronic fatigue syndrome, Alzheimer’s, AIDS, and sudden infant death syndrome. In this groundbreaking book, Robert O Becker explains how new and nontraditional healing techniques such as acupuncture, homeopathy, visualization, hypnosis, and electrotherapy work through an invisible common source—the body’s electrical system. He also offers practical ways to protect ourselves in our homes and offices from the hazardous effects of electromagnetic pollution and teaches us how to engage the healing energies of electromagnetism. Dr. Becker’s powerful synthesis reshapes the future of medicine by putting life energy into our medical perspective and enabling us to

see the body in its total living environment—the earth’s electromagnetic field.

In the 19th and early 20th centuries, representations of Poland and the Slavic East cast the region as a primitive, undeveloped, or empty space inhabited by a population destined to remain uncivilized without the aid of external intervention. These depictions often made direct reference to the American Wild West, portraying the eastern steppes as a boundless plain that needed to be wrested from the hands of unruly natives and spatially ordered into German-administrated units. While conventional definitions locate colonial space overseas, Kristin Kopp argues that it was possible to understand both distant continents and adjacent Eastern Europe as parts of the same global

periphery dependent upon Western European civilizing efforts. However, proximity to the source of aid translated to greater benefits for Eastern Europe than for more distant regions.

In the past few decades, scientists of human nature—including experimental and cognitive psychologists, neuroscientists, evolutionary theorists, and behavioral economists—have explored the way we arrive at moral judgments. They have called into question commonplaces about character and offered troubling explanations for various moral intuitions. Research like this may help explain what, in fact, we do and feel. But can it tell us what we ought to do or feel? In *Experiments in Ethics*, the philosopher Kwame Anthony Appiah explores how the new empirical moral psychology relates to the age-old project of philosophical ethics. Some moral theorists hold that the realm of morality must be autonomous of the sciences; others maintain that science undermines the authority of moral reasons. Appiah elaborates a vision of naturalism that resists both temptations. He traces an intellectual genealogy of the burgeoning discipline of "experimental philosophy," provides a balanced, lucid account of the work being done in this controversial and increasingly influential field, and offers a fresh way of thinking about ethics in the classical tradition. Appiah urges that the relation between empirical research and morality, now so often antagonistic, should be seen in terms of dialogue, not contest. And he shows how experimental philosophy, far from being something new, is actually as old as philosophy itself. Beyond illuminating debates about the connection between psychology and ethics, intuition and theory, his book

helps us to rethink the very nature of the philosophical enterprise.

Tacky Avon Books

An irreverent and charming collection of deeply personal essays about the joys of low pop culture and bad taste, exploring coming of age in the 2000s in the age of Hot Topic, Creed, and frosted lip gloss—from the James Beard Award-nominated writer of the *Catapult* column "Store-Bought Is Fine" *Tacky* is about the power of pop culture—like any art—to imprint itself on our lives and shape our experiences, no matter one's commitment to "good" taste. These fourteen essays are a nostalgia-soaked antidote to the millennial generation's obsession with irony, putting the aesthetics we hate to love—snakeskin pants, *Sex and the City*, Cheesecake Factory's gargantuan menu—into kinder and sharper perspective. Each essay revolves around a different maligned (and yet, Rax would argue, vital) cultural artifact, providing thoughtful, even romantic meditations on desire, love, and the power of nostalgia. An essay about the gym-tan-laundry exuberance of Jersey Shore morphs into an excavation of grief over the death of her father; in "You Wanna Be On Top," Rax writes about friendship and early aughts girlhood; in another, Guy Fieri helps her heal from an abusive relationship. The result is a collection that captures the personal and generational experience of

finding joy in caring just a little too much with clarity, heartfelt honesty, and Rax King's trademark humor. A VINTAGE ORIGINAL

The lack of universal access to eye-care services has varying causes across the Western Pacific Region. Some countries lack the capacity to provide specialized health services and trained eye-care personnel. As a result, eye-care services may only be available in urban centers, beyond the reach of people who cannot travel far. Other countries may have sufficient trained eye-care personnel and infrastructure to provide comprehensive service; however, these services may be privatized and unaffordable for those most in need. While the main objectives of this publication are aligned with the global action plan for the prevention of avoidable visual impairment, this Regional Action Plan provides a regional context for WHO support to help address specific needs in Asia and the Pacific.
