Data
visualisation is
sexy –
probably the
sexiest part of
statistics,
Data Science,
business
intelligence
and many
other fields
too. And it can
make or break
your study!
Few people
that have to
create charts
as part of their
study know
and
understand
how to create
charts for
maximum
effectiveness,
and as a result
struggle to

engage their
audience. And
that’s a
shame,
because a
well-crafted
chart has the
potential to
change the
world! Charts
really are that
important!
DataViz: How
to Choose the
Right Chart for
Your Data is a
short guide to
all the
different types
of charts you’ll
commonly
encounter in
statistics. It is
a snappy little
non-
threatening
book about
everything
you ever
wanted to
know (but
were afraid to

ask) about the
craft of
creating
inspirational
graphics for
your study,
presentation,
thesis, or just
about any
occasion –
irrespective of
your
audience.
First, I’ll
explain about
the different
types of
graphs you’ll
use. Then I’ll
show you
which data
goes on which
axis. I’ll show
you the
different types
of charts to
use, and how
to choose
which ones to
use. We’ll
move on to
how to style

your charts and review them with a critical eye to decide what should go on your graph, and – more importantly – what you should take off. Finally, I'll introduce you to DataViz – The Big Picture, an Ultra-High-Definition flowchart that will guarantee that you get the right chart first time, every time! By the time you've read this short book, you'll more about plotting charts than pretty much

everyone around you! Discover the world of DataViz.
