Childminding is one responsibility which is generally taken lightly. Child minders are often employed in a casual manner and there is often no synchronisation between the parenting style constantly used by the child minder and that adopted by the child's biological parent/s. Conscious investment is often not made on the emotional wellbeing of child minders. This book arms the reader with the knowledge and skills of recruiting, selecting, orientating, training, compensating, motivating and appraising the performance of child minders. The reader is further exposed to parenting needs for children of different developmental stages. The importance of investing on the emotional wellbeing of the child minder cannot be overstated. The reader is empowered with knowledge and skills of effectively making this investment. This book is a

must-read for all parents who want to protect their children from the lasting negative psychological effects which may unwittingly or deliberately be caused by child minders who are given too much responsibility with little boundaries and guidance.

Taylor & Francis
This was the first anthropological monograph to have dealt at length with the labour force of a major East African industry. It is a study of the African employees of the East African Railways and Harbours stationed at Kampala, Uganda, and living on the Railway-owned Nsambya housing estate. Set in the years

1964-5, shortly after Uganda's and Kenya's Independence, the book explores some of the consequences for African migrant workers of the changes affecting their society. Dr Grillo describes how falling prices for primary agricultural products, educational expansion and rising wages have created a high demand for employment. Those fortunate enough to find work enjoy a relatively high standard of living. Partly in consequence, the Railway labour force has become stabilised with a low turnover of employees, the majority of whom bring wives and children to live in town. They are, however, still migrants who maintain social and economic ties with their areas of origin. By fulfilling customary and personal obligations, individuals retain a position within an 'ethnic' system which provides one framework for relationships of solidarity and opposition. The industry itself with its work-units, occupational groups and grading system provides another. *Model Rules of Professional Conduct*

The integrity of knowledge that emerges from research is based on individual and collective adherence to core values of objectivity, honesty, openness, fairness, accountability, and stewardship. Integrity in science means that the organizations in which research is conducted encourage those involved to exemplify these values in every step of the research process. Understanding the dynamics that support "or distort" practices that uphold the integrity of research by all participants ensures that the research enterprise advances knowledge. The 1992 report *Responsible Science: Ensuring the Integrity of the Research Process* evaluated issues related to scientific responsibility and the

conduct of research. It provided a valuable service in describing and analyzing a very complicated set of issues, and has served as a crucial basis for thinking about research integrity for more than two decades. However, as experience has accumulated with various forms of research misconduct, detrimental research practices, and other forms of misconduct, as subsequent empirical research has revealed more about the nature of scientific misconduct, and because technological and social changes have altered the environment in which science is conducted, it is clear that the framework established more than two decades ago needs to be updated. Responsible Science served as a valuable benchmark to set the context for this most recent analysis and to help guide the committee's thought process. *Fostering Integrity in Research* identifies best practices in research and recommends practical options for discouraging and addressing research misconduct and detrimental research practices.

Aspen Publishing Technologies collectively called omics enable simultaneous measurement of an enormous number of biomolecules; for example, genomics investigates thousands of DNA sequences, and proteomics examines large numbers of proteins. Scientists are using these technologies to develop innovative tests to detect disease and to predict a patient's likelihood of responding to specific drugs. Following a recent case involving premature use of omics-based tests in cancer clinical trials at Duke University, the NCI requested that the IOM establish a committee to recommend ways to strengthen omics-based test development and evaluation. This report identifies best practices to enhance development, evaluation, and translation of omics-based tests while simultaneously reinforcing steps to ensure that these tests

are appropriately assessed for scientific validity before they are used to guide patient treatment in clinical trials.

School buildings in Maryland, Washington, D.C., New York, Boston, Chicago, South Carolina, and throughout America that have chipping, peeling, and flaking lead-based paint on the interior and exterior are exposing our children and others to lead poisoning. Having renovations performed on these already lead hazardous schools without implementing the proper protective protocols to prevent millions of more microscopic lead dust particles from spreading only compounds the exposure to lead poisoning. Moreover, if these same lead hazardous school buildings, also, have their water supply flowing through leaded pipes, pipes that are connected with lead solder, or have leaded fixtures attached to the fountains, then, our leaders of tomorrow and others are ingesting even more lead poisoning through drinking lead-tainted water. This non-

fiction book documents the truth that a Mathematics teacher, who has maintained her certification and accreditation in lead hazard evaluation and control since 1997 as a Repainting and Maintenance Supervisor, an Inspector Technician, a Lead Abatement Service Contractor, and thus, a Recognized Lead Expert by the Maryland Department of the Environment, identified four schools in Baltimore City that had either deteriorating, chipping, and flaking lead-based paint, major renovations that disturbed lead hazardous components and didn't have the proper protective protocols in place, or drinking water that was lead-contaminated. She attempted on numerous occasions to have the health hazards addressed and resolved. However, the powers that be only wanted to silence her and continue concealing the truth that for over a decade the custodians of these public schools, the owners, and others knowingly, willingly, and negligently exposed lives to lead poisoning. Moreover, the detailed, documented true findings from five Finders of Fact

that substantiate that the powers that be retaliated against the messenger because she blew the whistle regarding the lead hazardous in these Baltimore City schools. Police violence is a volatile, recurring social justice issue that often receives media attention, leads to demonstrations or protests and increases the tension between law enforcement agencies and the community they serve. Tom Barker examines police homicide and the different behavior patterns that lead to it, ranging from misadventure to intent. To better understand this complex issue, Barker has created 3 main categories: accidental homicides, justifiable homicides and criminal homicides. Barker includes a variety of cases from accidental deaths involving careless, reckless or negligent law enforcement officers to murders committed by LEOs engaged in organized crime or serial sexual homicides. This

book will be of interest to those studying criminology, criminal justice, sociology, political science, etc.
