This innovative collection examines the transnational movements, effects, and transformations of religion in the contemporary world, offering a fresh perspective on the interrelation between globalization and religion. Transnational Transcendence challenges some widely accepted ideas about this relationship—in particular, that globalization can be understood solely as an economic phenomenon and that its religious manifestations are secondary. The book points out that religion's role remains understudied and undertheorized as an element in debates about globalization, and it raises questions about how and why certain forms of religious practice and intersubjectivity succeed as they cross national and cultural boundaries. Framed

by Thomas J. Csordas's introduction, this timely volume both urges further development of a theory of religion and globalization and constitutes an important step toward that theory.

Globalization Prentice Hall

The world today is far less a global village than a “global city”, as global network of multidimensional urban spaces of congestion prominently forming – and also formed by – globalization. But the relevance of cities is nothing but new. They were essential for culture and civilization worldwide, they allowed a centralization of power and knowledge and they were crucial for the division of labor and for the organization of mass demand. Further, as places of intense and continuous interactions, cities are the locations par excellence for global history to take place. Thus, there is a need to study the history of cities in connection with the history of globalization from this perspective. This book is dedicated to contribute to the still underdeveloped but growing literature connecting the history of cities worldwide and their relation to global processes. The authors do so from various disciplinary backgrounds and by

referring to different times and places. We visit ancient Alexandria, nineteenth century Zanzibar, and modern-day São Paulo, among others, and we view these cities not only in their globality, but also through their heritage, their economic relevance, their architecture, or financial flows connecting them. Further, the book also contains systematic considerations about “global city”, especially the general role of cities in development, cities in global history teaching, and cities' relationships to global commodity chains.

*Sawyer's Internal Auditing* Univ of California Press

'The State and Revolution' is a book by Vladimir Lenin describing the role of the state in society, the necessity of proletarian revolution, and the theoretic inadequacies of social democracy in achieving revolution to establish the dictatorship of the proletariat. Lenin's direct and simple definition of the State is that "the State is a special organization of force: it is an organization of violence for the suppression of some class." Hence his denigration even of parliamentary democracy, which was influenced by what Lenin saw as the recent increase of bureaucratic and military influences: "To decide once every few years which member of the ruling class is to repress and crush the people through parliament – this is the real essence of bourgeois parliamentarism, not only in parliamentary-constitutional monarchies, but also in the most democratic republics."

*Art and the Global Economy* BRILL

In rethinking and reframing the American national narrative in a wider context, the contributors to this volume ask questions about both nationalism and the discipline

of history itself. The essays offer fresh ways of thinking about the traditional themes and periods of American history. By locating the study of American history in a transnational context, they examine the history of nation-making and the relation of the United States to other nations and to transnational developments. What is now called globalization is here placed in a historical context. A cast of distinguished historians from the United States and abroad examines the historiographical implications of such a reframing and offers alternative interpretations of large questions of American history ranging from the era of European contact to democracy and reform, from environmental and economic development and migration experiences to issues of nationalism and identity. But the largest issue explored is basic to all histories: How does one understand, teach, and write a national history even as one recognizes that the territorial boundaries do not fully contain that history and that within that bounded territory the society is highly differentiated, marked by multiple solidarities and identities? Rethinking

American History in a Global Age advances an emerging but important conversation marked by divergent voices, many of which are represented here. The various essays explore big concepts and offer historical narratives that enrich the content and context of American history. The aim is to provide a history that more accurately reflects the dimensions of American experience and better connects the past with contemporary concerns for American identity, structures of power, and world presence.

Globalization, Education and Social Justice, which is the tenth volume in the 12-volume book series Globalisation, Comparative Education and Policy Research, presents up-to-date scholarly research on major discourses concerning global trends in education, social justice and policy research. It provides an easily accessible, practical yet scholarly source of information about the international concern in the field of social justice, globalisation, and policy research. Above all, the book offers the latest findings to the critical issues in education and social justice globally. It is a sourcebook of ideas for researchers, practitioners and policy makers in education, globalisation and social justice education reforms around the world. It offers a timely overview of current issues in social justice affecting education policy research in the global culture. It provides directions in education, and policy research, relevant to transformational educational reforms in the 21st century. The book critically examines the overall interplay between globalisation, education reforms, and social justice. It draws upon recent studies in the areas of globalisation, social justice

education reforms and the role of the State. It explores conceptual frameworks and methodological approaches applicable in the research covering the State, globalisation, equity, education, and social justice. It demonstrates the neo-liberal ideological imperatives of education and policy reforms, and illustrates the way the relationship between the State and education policy affects current models and trends in education reforms for social justice and schooling globally. Various book chapters critique the dominant discourses and debates pertaining to the politics of social justice and education globally and the newly constructed and re-invented models of neo-liberal ideology in education and policy reforms. Using a number of diverse paradigms in comparative education research, ranging from critical theory to post-structuralist discourses, the authors, by focusing on globalisation, social justice and democracy, attempt to examine critically both the reasons and outcomes of education reforms and policy change for social justice. The volume offers a more informed critique on the Western-driven models of education reforms and

implications for social justice. The book also draws upon recent studies in the areas of equity, cultural capital and dominant ideologies in education. The general intention is to make Globalization, Education and Social Justice available to a broad spectrum of users among policy-makers, academics, graduate students, education policy researchers, administrators, and practitioners in the education and related professions.

*The Age of Globalization* Springer

This book examines the role of experts and expertise in the dynamics of globalisation since the mid-nineteenth century. It shows how engineers, scientists and other experts have acted as globalising agents, providing many of the materials and institutional means for world economic and technical integration.

Focusing on the study of international connections, *Technology and Globalisation* illustrates how expert practices have shaped the political economies of

interacting countries, entire regions and the world economy. This title brings together a range of approaches and topics across different regions, transcending nationally-bounded historical narratives. Each chapter deals with a particular topic that places expert networks at the centre of the history of globalisation. The contributors concentrate on central themes including intellectual property rights, technology transfer, tropical science, energy production, large technological projects, technical standards and colonial infrastructures. Many also consider methodological, theoretical and conceptual issues.

In his exploration of the interaction between religion and worldwide social and cultural change, the author examines the

major theories of global change and discusses the ways in which such change impinges on contemporary religious practice, meaning and influence. Beyer explores some of the key issues in understanding the shape of religion today, including religion as culture and as social system, pure and applied religion, privatized and publicly influential religion, and liberal versus conservative religions. He goes on to apply these issues to five contemporary illustrative cases: the American Christian Right; Liberation Theology movements in Latin America; the Islamic Revolution in Iran; Zionists in Israel; and religiou
