AN INSTANT NEW YORK TIMES BESTSELLER • A REESE'S BOOK CLUB PICK Tired, stressed, and in need of more help from your partner? Imagine running your household (and life!) in a new way... It started with the Sh*t I Do List. Tired of being the "shefault" parent responsible for all aspects of her busy household, Eve Rodsky counted up all the unpaid, invisible work she was doing for her family—and then sent that list to her husband, asking for things to change. His response was...underwhelming. Rodsky realized that simply identifying the issue of unequal labor on the home front wasn't enough: She needed a solution to this universal problem. Her sanity, identity, career, and marriage depended on it. The result is Fair Play: a time- and anxiety-saving system that offers couples a completely new way to divvy up domestic responsibilities. Rodsky interviewed more than five hundred men and women from all walks of life to figure out what the invisible work in a family actually entails and how to get it all done efficiently. With 4 easy-to-follow rules, 100 household tasks, and a series of conversation starters for you and your partner, Fair Play helps you prioritize what's important to your family and who should take the lead on every chore, from laundry to homework to dinner. "Winning" this game means rebalancing your home life, reigniting your relationship with your significant other, and reclaiming your Unicorn Space—the time to develop the skills and passions that keep you interested and interesting. Stop drowning in to-dos and lose some

of that invisible workload that's pulling you down. Are you ready to try Fair Play? Let's deal you in.

An encyclopaedic guide to production techniques and materials for product and industrial designers, engineers, and architects. Today's product designers are presented with a myriad of choices when creating their work and preparing it for manufacture. They have to be knowledgeable about a vast repertoire of processes, ranging from what used to be known as traditional "crafts" to the latest technology, to enable their designs to be manufactured effectively and efficiently. Information on the internet about such processes is often unreliable, and search engines do not usefully organize material for designers. This fundamental new resource explores innovative production techniques and materials that are having an impact on the design industry worldwide. Organized into four easily referenced parts—Forming, Cutting, Joining, and Finishing—over seventy manufacturing processes are explained in depth with full technical descriptions; analyses of the typical applications, design

opportunities, and considerations each process offers; and information on cost, speed, and environmental impact. The accompanying step-by-step case studies look at a product or component being manufactured at a leading international supplier. A directory of more than fifty materials includes a detailed technical profile, images of typical applications and finishes, and an overview of each material's design characteristics. With some 1,200 color photographs and technical illustrations, specially commissioned for this book, this is the definitive reference for product designers, 3D designers, engineers, and architects who need a convenient, highly accessible, and practical reference.

The physical model is an important communication tool for architects. Although the proliferation of CAD programs has enabled the creation of increasingly complex computer models and virtual environments, there is also a growing need to address the three-dimensional qualities of architecture that may be lost when using such media. This book focuses on the inspiring possibilities for modelling the built environment with all the different media and techniques available. In describing the use of different models in different contexts, the book provides a practical guide to how and why models are used, and what they are used for. This second edition includes more detailed step-by-step exercises, expanded discussion of materials and techniques, updated coverage of digital techniques and new case studies.

This is the most comprehensive guide to laser engraving ever written for the awards and personalization industries. It is ideal for anyone who has recently purchased a laser engraver or is looking to purchase one to start a laser engraving business. Written by a 28 year veteran of laser engraving, shop owner, writer and instructor who currently runs CO2 and Fiber lasers on a daily basis, he has incorporated in this book as much knowledge and experience as possible including tons of color photographs, layouts and product ideas. In a single volume, here is everything you need to know to select, install and run a laser engraver. All major brands are included as well as glass tube lasers, metal tube CO2 lasers and fiber lasers. Also included is a complete discussion of the various materials that can be lasered, their sources, advantages and limitations. A list of wholesale suppliers and educational sources are also included. FREE with purchase is online access to his original LASER ENGRAVING DVD (a \$59.95 value), CorelDraw instructional videos and more! The author writes monthly articles about laser engraving and related topics for the trade magazine, the Engravers Journal. This book includes recommendations for buying a laser engraver including the features and options available, so you can make the right buying decision. If you already have a laser engraver, there are hundreds of ideas for expanding your engraving business including resources available. Whether you plan to start a home-based business, a storefront or just engrave for fun, this is intended to be your most valuable resource. Because it contains information about all the various materials you can laser engrave and how to do it, what to avoid and shortcuts to make it easier, you will want to keep the 240+ jam-packed pages of information and ideas next to your engraver. Materials included in the manual include wood, acrylic, plastics, leather, metal, films, Rhinestoning, fabric, and many more. This manual includes various projects to help the beginner learn about their laser and how to use the settings, options and features to make money. It also provides basic information about setting up a shop, either in a home or storefront, including the types of chemicals and other products that might be needed to perform all the various applications of laser engraving. Included are notations that apply to either CO2, Fiber Lasers or Glass Tube Lasers along with the advantages and disadvantages of each. Also included is a discussion of gantry vs. Galvo style lasers and the advantages of each.
