This volume of *The Dark Corners* is not unlike the previous three. As with the others, you will find information here not found anywhere else. This volume is slightly different though, with much attention given to what I consider leftovers and loose ends. I have also addressed some additional aspects of the Lindbergh kidnapping in which many have expressed interest. This includes a chapter on the "spy" Jacob Nosovitsky and one on Violet Sharp, a topic that I have avoided—until now.

This book is devoted to a systems-theoretical presentation of the main results of applying the systemic yoyo model and relevant analytical tools to the topics of money and financial institutions. The author presents the main concepts and results of the subject matter in the language of systems science, which has in the past century prompted revolutionary applications of systems research in various subfields of traditional disciplines. This volume applies a brand new logic of reasoning to some of the unsettled problems in the area of money and banking. Due to the particular systemic approach employed, the reader will be able to see how different economic activities are implicitly related to each other and how financial decisions are holistically made in reference to seemingly unrelated events. That is, the learning of this particular subject matter takes place at a different, more elevated level, from which, among others, economies are respectively seen as

both closed and open systems; their interactions emulate those of rotational pools of fluids. This book can be used as a textbook for researchers and graduate students in economics, finance, systems science, and mathematical / systems modeling. It will also be useful as a reference book for applied economists and various policy makers.
