This is the second volume in a series of
monographs which are intended to
promote information exchange and
international harmonised standards for
the quality control and use of herbal
medicines. It contains scientific
information on 30 selected plants, and
each entry includes a pharmacopoeial
summary for quality assurance
purposes, information on its clinical
application and sections on
contraindications, pharmacology, safety
issues, and dosage forms. It provides
two cumulative indexes with entries in
alphabetical order by plant name and
according to the plant material of
interest.

This work has been selected by scholars
as being culturally important, and is part
of the knowledge base of civilization as
we know it. This work was reproduced
from the original artifact, and remains as
true to the original work as possible.
Therefore, you will see the original
copyright references, library stamps (as
most of these works have been housed
in our most important libraries around
the world), and other notations in the
work. This work is in the public domain in
the United States of America, and
possibly other nations. Within the United
States, you may freely copy and
distribute this work, as no entity
(individual or corporate) has a copyright
on the body of the work. As a
reproduction of a historical artifact, this
work may contain missing or blurred
pages, poor pictures, errant marks, etc.
Scholars believe, and we concur, that
this work is important enough to be
preserved, reproduced, and made
generally available to the public. We
appreciate your support of the
preservation process, and thank you for
being an important part of keeping this
knowledge alive and relevant.

Leçons d'anatomie comparée Andres
Bello

Awarded Bookauthority's "Best
Aquaculture Books of all Time" A
comprehensive resource that covers all
the aspects of sex control in aquaculture
written by internationally-acclaimed
scientists Comprehensive in scope, Sex
Control in Aquaculture first explains the
concepts and rationale for sex control in
aquaculture, which serves different

purposes. The most important are: to produce monosex stocks to rear only the fastest-growing sex in some species, to prevent precocious or uncontrolled reproduction in other species and to aid in broodstock management. The application of sex ratio manipulation for population control and invasive species management is also included. Next, this book provides detailed and updated information on the underlying genetic, epigenetic, endocrine and environmental mechanisms responsible for the establishment of the sexes, and explains chromosome set manipulation techniques, hybridization and the latest gene knockout approaches. Furthermore, the book offers detailed protocols and key summarizing information on how sex control is practiced worldwide in 35 major aquaculture species or groups, including fish and crustaceans, and puts the focus on its application in the aquaculture industry. With contributions from an international panel of leading scientists, *Sex Control in Aquaculture* will appeal to a large audience: aquaculture/fisheries professionals and students, scientists or biologists working with basic aspects of fish/shrimp biology, growth and reproductive endocrinology, genetics, molecular biology, evolutionary biology, and R&D managers and administrators. This text explores sex control technologies and monosex production of commercially-farmed fish and crustacean species that are highly in demand for aquaculture, to improve feed utilization efficiency, reduce energy consumption for reproduction and eliminate a series of problems caused by mixed sex rearing. Thus, this book: Contains contributions from an international panel of leading scientists and professionals in the field Provides

comprehensive coverage of both established and new technologies to control sex ratios that are becoming more necessary to increase productivity in aquaculture Includes detailed coverage of the most effective sex control techniques used in the world's most important commercially-farmed species *Sex Control in Aquaculture* is the comprehensive resource for understanding the biological rationale, scientific principles and real-world practices in this exciting and expanding field.

Lecons d'anatomie comparée John Wiley & Sons

This book continues as volume 5 of a multicompendium on Edible Medicinal and Non-Medicinal Plants. It covers edible fruits/seeds used fresh, cooked or processed as vegetables, cereals, spices, stimulant, edible oils and beverages. It covers selected species from the following families: Apiaceae, Brassicaceae, Chenopodiaceae, Cunoniaceae, Lythraceae, Papaveraceae, Poaceae, Polygalaceae, Polygonaceae, Proteaceae, Ranunculaceae, Rhamnaceae, Rubiaceae, Salicaceae, Santalaceae, Xanthorrhoeaceae and Zingiberaceae. This work will be of significant interest to scientists, medical practitioners, pharmacologists, ethnobotanists, horticulturists, food nutritionists, botanists, agriculturists, conservationists, lecturers, students and the general public. Topics covered include: taxonomy; common/English and vernacular names; origin and distribution; agroecology; edible plant parts and uses; botany; nutritive/pharmacological properties, medicinal uses, nonedible uses; and selected references.
