This monograph is devoted to computational morphology, particularly to the construction of a two-dimensional or a three-dimensional closed object boundary through a set of points in arbitrary position. By applying techniques from computational geometry and CAGD, new results are developed in four stages of the construction process: (a) the gamma-neighborhood graph for describing the structure of a set of points; (b) an algorithm for constructing a polygonal or polyhedral boundary (based on (a)); (c) the flintstone scheme as a hierarchy for polygonal and polyhedral approximation and localization; (d) and a Bezier-triangle based scheme for the construction of a smooth piecewise cubic boundary.

Excerpt from *The Entity-Relationship Model: A Basis for the Enterprise View of Data* The subject of

the logical view of data has attracted considerable attention in the past ten years. However, most researchers have focused on the user View of data. The need for studying the enterprise view of data was not recognized until recently. Different users of a database may have different views of the database, but the enterprise should have a unique and consistent view of the database. This is particularly important in designing a logically meaningful and consistent database. The concept of the enterprise View of data is very useful in the database design process and in. "[A] remarkable saga... Engrossing." —Booklist, starred review In this triumphant debut inspired by true events, a ragtag gang of journalists and resistance fighters risk everything for an elaborate scheme to undermine the Reich. The Nazis stole their voices. But they would not be silenced. Brussels, 1943. Twelve-year-old street orphan Helene survives by living as a boy and selling copies of the country's most popular newspaper, *Le Soir*, now turned into Nazi propaganda. Helene's world changes when she befriends a rogue journalist, Marc Aubrion, who draws her into a secret network that publishes dissident underground newspapers. The Nazis track down Aubrion's team and give them an impossible choice: turn the resistance newspapers into a Nazi propaganda bomb that will sway public opinion against the Allies, or be killed. Faced with no decision at all, Aubrion has a brilliant idea. While pretending to do the Nazis' bidding, they will instead publish a fake edition of *Le Soir* that pokes fun at Hitler and Stalin—daring to laugh in the face of their oppressors. The ventriloquists have agreed to die for a joke, and they have only eighteen days to tell it. Featuring an unforgettable cast of characters and stunning historical detail, E.R. Ramzipoor's dazzling debut novel illuminates the extraordinary acts of courage by ordinary people forgotten by time. It is a moving and powerful ode to the importance of the written word and to the unlikely heroes who went to extreme lengths to orchestrate the most stunning feat of journalism in modern history.
