Perl is a versatile, powerful programming language used in a variety of disciplines, ranging from system administration to web programming to database manipulation. One slogan of Perl is that it makes easy things easy and hard things possible. Intermediate Perl is about making the leap from the easy things to the hard ones. Originally released in 2003 as Learning Perl Objects, References, and Modules and revised and updated for Perl 5.8, this book offers a gentle but thorough introduction to intermediate programming in Perl. Written by the authors of the best-selling Learning Perl, it picks up where that book left off. Topics include: Packages and namespaces References and scoping Manipulating complex data structures Object-oriented programming Writing and using modules Testing Perl code Contributing to CPAN Following the successful format of Learning Perl, we designed each chapter in the book to be small enough to be read in just an hour or two, ending with a series of exercises to help you practice what you've learned. To use the

book, you just need to be familiar with the material in Learning Perl and have ambition to go further. Perl is a different language to different people. It is a quick scripting tool for some, and a fully-featured object-oriented language for others. It is used for everything from performing quick global replacements on text files, to crunching huge, complex sets of scientific data that take weeks to process. Perl is what you make of it. But regardless of what you use Perl for, this book helps you do it more effectively, efficiently, and elegantly. Intermediate Perl is about learning to use Perl as a programming language, and not just a scripting language. This is the book that turns the Perl dabbler into the Perl programmer.

**EBOOK: How To Design And Deliver Enhanced Modules** Frontiers Media SA  
 Essay from the year 2011 in the subject Business economics - Marketing, Corporate Communication, CRM, Market Research, Social Media, grade: 1,3, University of St Andrews (School of Management), language: English, abstract: Identify the main types of political risk encountered by multinational corporations and discuss how these risks can be minimized. Introduction The controversy between the Kazak government and the Italian oil company ENI about the exploitation of Kashagans oil fields is only one out of many cases, in which political violence acts or governmental decisions threatened foreign investments of a multinational enterprise (MNE). In April 2006, the Dacion and Jusepin oil fields, operated by ENI and the French company Total, were taken over by the Venezuelan government, because they rejected to change their business operations into joint ventures with the state-owned oil company PDVSA (Ferrari and Rolfini 2008). Stated by Kesternich and Schnitzer (2009) some recent empirical studies identified that for MNEs political risk is one of the most important factors when considering a foreign investment. Foreign investments nowadays seem to be even more risky in terms of pollution that result in natural

catastrophes such as caused by BP (Heller 2011), cultural conflicts or political disturbances for which Lybia (Yang 2011) represents a recent example and an increasing social disparity (Bloch, Koeplinger and Wolfrum 2007) [...]"

Construction Economics provides students with the principles underlying the relationship between economic theory and the construction industry. Its new approach specifically examines the problems of securing sustainable construction and this fifth edition broadens the message to address the immediacy of the problems relating to the carbon-based world that we have constructed. Embracing the whole process of the construction life cycle, the new edition discusses the economic impact of the Covid pandemic on the industry and the broader implications of the promise to build back better. It also includes new coverage of the opportunities offered by technology, the establishment of higher standards to achieve greater energy efficiency and wellbeing, the adoption of the principles of a circular economy, the retrofit of existing buildings and the recycling of materials. New sections also highlight the methodology of the subject to identify the boundaries of construction economics and clarify what to expect and what can be achieved. As with previous editions, it retains a tried and tested format including: a clear and user-friendly style use of colour for emphasis regular summaries of key points a glossary of key terms extensive use of tables, figures and data readings from Construction Management and Economics tutorial questions to review each section research guidance reviews of useful websites. This invaluable textbook is essential reading across a wide range of disciplines. It provides the economic context to the relevance of sustainability and debates about climate change, highlighting the vital contributions that surveyors, contractors, project managers, engineers, architects and developers can offer to take it forward.

There are many books about teaching in Geography, but this is the first dealing specifically with Pedagogic Research, its methods and practices. Pedagogy research concerns the processes of learning and the development of learners. It is a learner-centred activity that aims to evaluate and improve the ways that students learn and learn to manage, control and comprehend their own learning processes, first as Geographers in Higher Education but equally as future educated citizens. This book collects together some key research papers from the Journal of Geography in Higher Education. They concern original research and critical perspectives on how Geographers learn, critical evaluations of both new and traditional frameworks and methods used for Pedagogic research in Geography, and some case studies on the promotion of self-authorship, learner autonomy, in key Geography Higher Education contexts such as fieldwork and undergraduate project work. This book is a compilation of articles from various issues of the Journal of Geography in Higher Education.

Would you like to make the modules you teach more engaging? Do you want to deliver enjoyable and effective learning? Are you interested in a model that has been proven to work? Would you like to evaluate the quality of what you deliver? This book is key reading for university and further education tutors who want to engage and motivate their students, and create learning environments that cater for diversity whilst producing more successful outcomes. Based on experience, the author provides practical expertise on: Challenging the standard module structures Maximising attendance, enthusiasm and commitment without compromising quality Putting supported assessment and feedback at the heart of learning Providing appropriate support for all students Increasing self-esteem, confidence and independence in learning Evaluating the success of the module The book has two sections – the first focuses on design, and the second on delivery and evaluation. It details practical ideas for seminars, lectures, assessment, feedback and student support that readers will be able to apply immediately to their own teaching practice. As such, the book provides key reading for all those interested in improving student learning and

retention.

This text focuses on the introduction of economic principles to provide an understanding of the commercial and residential property sectors and the markets for development, construction and occupation of property. Economics and Property supports students following property economics courses leading to a career in the property profession. Experience suggests that economics can initially be perceived as challenging; this book makes the subject clear and comprehensible. Extracts and examples from the Estates Gazette and its electronic archive EGi are used to provide examples and raise questions for discussion. Glossaries, key learning points and a clear layout make this book the best introduction to economics for the property profession.

This book examines the challenges of cross-professional comparisons and proposes new forms of performance assessment to be used in professions education. It addresses how complex issues are learned and assessed across and within different disciplines and professions in order to move the process of "performance assessment for learning" to the next level. In order to be better equipped to cope with increasing complexity, change and diversity in professional education and performance assessment, administrators and educators will engage in crucial systems thinking. The main question discussed by the book is how the required competence in the performance of students can be assessed during their professional education at both undergraduate and graduate levels. To answer this question, the book identifies unresolved issues and clarifies conceptual elements for performance assessment. It reviews the development of constructs that cross disciplines and professions such as critical thinking, clinical reasoning, and problem solving. It discusses what it means to instruct and assess students within their own domain of study and across various roles in multiple contexts, but also what it means to instruct and assess students across domains of study in order to judge integration and transfer of learning outcomes. Finally, the book examines what it takes for administrators and educators to develop competence in assessment, such as reliably judging student work in relation to criteria from multiple sources. "... the co-editors of this volume, Marcia Mentkowski and Paul F. Wimmers, are associated with two institutions whose characters are so intimately associated with the insight that assessment must be integrated with curriculum and instructional program if it is to become a powerful influence on the educational process ..." Lee Shulman, Stanford University

The important thing about The Important Book -- is that you let your child tell you what is important about the sun and the moon and the wind and the rain and a bug and a bee and a chair and a table and a pencil and a bear and a rainbow and a cat (if he wants to). For the important thing about The Important Book is that the book goes on long after it is closed. What is most important about many familiar things -- like rain and wind, apples and daisies -- is suggested in rhythmic words and vivid pictures. 'A perfect book . . . the text establishes a word game which tiny children will accept with glee.' -- K.

The National Science Education Standards address not only what students should learn about science but also how their learning should be assessed. How do we know what they know? This accompanying volume to the Standards focuses on a key kind of assessment: the evaluation that occurs regularly in the classroom, by the teacher and his or her students as interacting participants. As students conduct experiments, for example, the teacher circulates around the room and asks individuals about their findings, using the feedback to adjust lessons plans and take other actions to boost learning. Focusing on the teacher as the primary player in assessment, the book offers assessment guidelines and explores how they can be adapted to the individual classroom. It features examples, definitions, illustrative vignettes, and practical suggestions to help teachers obtain the greatest benefit from this daily evaluation and tailoring process. The volume discusses how classroom assessment differs from conventional testing and grading and how it fits into the larger, comprehensive assessment system.

This book examines a range of issues emerging from the interaction of Information Technologies and organizational systems. It contains a collection of research papers focusing on themes of growing interest in the field of Information Systems, Organization Studies, and Management. The book offers a multidisciplinary view on Information Systems aiming to disseminate academic knowledge. It might be particularly relevant to IT practitioners such as information systems managers, business managers and IT consultants. The volume is divided into six sections, each one focusing on a specific theme. The content of each section is based on a selection of the best papers (original double blind peer reviewed contributions) presented at the annual conference of the Italian chapter of AIS, which has been held in Rome, Italy in September 2012.

This book addresses the need to diversify mainstream forms of assessment currently used in Higher Education in order to re-establish the focus on the learning process. Making assessment central to student learning is about returning to what current research emphasises: the primary beneficiary of assessment should be the student. To achieve this in the assessment context, students and tutors must engage in a process of dialogue and feedback. It seems to be widely accepted that assessment succeeds when the learner monitors, identifies and then is able to 'bridge' the gap between current learning achievements and agreed goals. It is, however, more questionable whether adequate opportunities are given to students to be active participants in closing what has been termed 'the loop'. Contributors to this book have responded in different ways to the challenge of enhancing learning through assessment, offering reasons for the lack of focus on learning within assessment processes as well as suggesting possible solutions. The chapters demonstrate a balance between innovation and practicality, drawing on the underpinning theories. The result is both rich in discussion and an extremely useful resource for practitioners. This book was originally published as a special issue of Assessment & Evaluation in Higher Education.
