Human Factors Handbook for Process Plant Operations Provides clear and simple instructions for integrating Human Factors principles and practices in the design of processes and work tasks Human Factors, the science of interaction between humans and other elements of a system, draws from disciplines such as psychology, ergonomics, anthropometrics, and physiology to understand how and why people behave and perform as they do—and how best to support them in performing tasks. The goals of the Human Factors approach are to improve human reliability, minimize the risk

from human error, and optimize the working environment, human wellbeing, and overall system performance. Human Factors Handbook for Process Plant Operations guides supervisors, managers, and engineers on incorporating Human Factors principles and practices into plant maintenance and operations. With thorough and accessible coverage of all Human Factors topics of relevance to process industries, this easy-to-use handbook uses real-world anecdotes and case studies to demonstrate effective training and learning, task planning, communications, emergency response, risk and error management, and more. Throughout the text, the authors offer valuable insights into why people make mistakes while providing advice on how to help workers perform their process operational tasks successfully. Explains all essential Human Factors concepts and knowledge with clear descriptions and illustrative examples Offers actionable advice and models of good practice that can be applied to design, process operations, start-ups and shut-downs, and maintenance Addresses job aids, equipment design, competence, task support, non-technical skills, working with contractors, and managing change Discusses how lack of Human Factors considerations during the engineering design phase can adversely affect safety and performance Describes how to use indicators to both recognize and learn from human error and performance issues Written by highly experienced operating and maintenance personnel, Human Factors Handbook for Process Plant Operations is an indispensable resource for everyone involved with defining, planning, training, and managing process operations, maintenance, and emergency response in the food, pharmaceutical, chemical, petroleum, and refining industries. The missions of both the CCPS and EI include developing and disseminating knowledge, skills and good practices to protect people, the environment, and property by bringing the best knowledge and practices to industry, academia, governments and the public around the world through collective wisdom, tools, training and expertise. The CCPS, an industrial technology alliance of the American Institute

of Chemical Engineers (AIChE), has been at the forefront of documenting and sharing important process safety risk assessment methodologies for more than 35 years and has published over 100 books in its process safety guidelines and process safety concept book series. The EI's Technical Work Program addresses the depth and breadth of the energy sector from fuels and fuels distribution to health and safety, sustainability and the environment. The EI program provides cost-effective, value-adding knowledge on key current and future international issues affecting those in the energy sector.

Helen Sloane is in for one interesting year. Written as a series of journal entries, Heaven Help Helen Sloane is refreshingly honest, poignant, and often hilarious, documenting—in Helen's own words—the daily struggles a young Christian woman must face. Helen's new job as a social worker keeps her busy all day in a whirlwind of case notes and court papers, and at home she's a house group leader for Frenton-on-Sea's New Wave Christian Fellowship. She loves her church but she struggles with faith and doubt, exposed to the religious extremes of both hyper-spiritual friends and her New Age mom. And with her busy schedule, Helen also struggles to make time for love. Still, she finds two men in her life: a handsome worship leader who might not be as godly as he seems, and a former Christian turned Bohemian bad boy. Can she keep her faith strong in the midst of a chaotic life? Jeff Lucas answers this question through the joy, tragedy, and heartbreak revealed in the pages of Helen Sloane's journal.

As the knowledge economy takes shape, editors face many challenges. Technology is transforming publishing, text is losing out to graphics, and writing is distorted by cliché, hype and spin. More than ever, editors are needed to add value to information and to rescue readers from boredom and confusion. The Editor's Companion explains the traditional skills of editing for publication and how to adapt them for digital production. It describes the editorial tasks for print and screen publications, from fantasy novels and academic texts to web pages and government documents. It is an essential tool for professional editors, as well as media and publications officers, self-publishers and writers editing their own work. This revised edition features extended coverage of on-screen editing, single-source publishing and digital rights, a comprehensive glossary of editing terms and a companion website developed especially for students that includes editing exercises, expert 'tips' and essential weblinks.

Based on detailed multi-disciplinary analyses of more than 800 recorded handover interactions, audits of written handover documentation, interviews and survey responses, the contributing authors identify features of effective and ineffective clinical handovers in diverse hospital contexts. The authors then translate their descriptive findings into practical protocols, communication strategies and checklists that clinicians, managers and policy makers can apply to improve the safety and quality of clinical handovers. All the contributors are affiliated with the International Research Centre for Communication in Healthcare (IRCCH), an international multidisciplinary organisation of over 90 healthcare professionals from more than 17 countries committed to improving improving communication in healthcare systems around the world. 'The authors have created a new and tightly woven

systems safety net that will, if implemented, significantly reduce the occurrence of errors resulting from cumulative communication failures.' -H. Esterbrook Longmaid III, MD, FACR, President of Medical Staff, Beth Israel Deaconess-Milton Hospital, Milton, MA USA 'Uncommonly valuable for the rigorous, original communication research it reports and for the careful translation of the research findings into practical strategies that actually improve clinical handovers in the real world of practice.' -Professor Suzanne Kurtz, Washington State University 'This clear, plain English book is an outstanding resource for the training of all involved in healthcare.' -Elizabeth Trickett, (Former) Director of Safety and Quality, ACT Health, Australia

This landmark publication published by the AAMC identifies a list of integrated activities to be expected of all M.D. graduates making the transition from medical school to residency. This guide delineates 13 Entrustable Professional Activities (EPAs) that all entering residents should be expected to perform on day 1 of residency without direct supervision regardless of specialty choice. The Core EPAs for Entering Residency are designed to be a subset of all of the graduation requirements of a medical school. Individual schools may have additional mission-specific graduation requirements, and specialties may have specific EPAs that would be required after the student has made the specialty decision but before residency matriculation. The Core EPAs may also be foundational to an EPA for any practicing physician or for specialty-specific EPAs. Update: In August 2014, the AAMC selected ten institutions to join a five-year pilot to test the implementation of the Core Entrustable Professional Activities (EPAs) for Entering Residency. More than 70 institutions, representing over half of the medical schools accredited by the U.S. Liaison Committee on Medical Education (LCME), applied to join the pilot, demonstrating the significant energy and enthusiasm towards closing the gap between expectations and performance for residents on day one. The cohort reflects the breadth and diversity of the applicant pool, and the institutions selected are intended to complement each other through the unique qualities and skills that each team and institution brings to the pilot. Faculty and Learners' Guide (69 pages) - Developing faculty: The EPA descriptions, the expected behaviors, and the vignettes are expected to serve as the foundation for faculty development. Faculty can use this guide as a reference for both feedback and assessment in pre-clinical and clinical settings. - Developing learners: Learners can also use this document to understand the core of what is expected of them by the time they graduate. The EPA descriptions themselves delineate the expectations, while the developmental progression laid out from pre-entrustable to entrustable behaviors can serve as the roadmap for achieving them.
