KEELY MCCULLOUGH

This Civilisation is Finished Tor Books

A practical and comprehensive guide to surviving the greatest disaster of our time, from New York Times bestselling self-help author and beloved CBS Sunday Morning science and technology correspondent David Pogue. You might not realize it, but we're already living through the beginnings of climate chaos. In Arizona, laborers now start their day at 3 a.m. because it's too hot to work past noon. Chinese investors are snapping up real estate in Canada. Millennials have evacuation plans. Moguls are building bunkers. Retirees in Miami are moving inland. In *How to Prepare for Climate Change*, bestselling self-help author David Pogue offers sensible, deeply researched advice for how the rest of us should start to ready ourselves for the years ahead. Pogue walks readers through what to grow, what to eat, how to build, how to insure, where to invest, how to prepare your children and pets, and even where to consider relocating when the time comes. (Two areas of the country, in particular, have the requisite cool temperatures, good hospitals, reliable access to water, and resilient infrastructure to serve as climate havens in the years ahead.) He also provides wise tips for managing your anxiety, as well as action plans for riding out every climate catastrophe, from superstorms and wildfires to ticks and epidemics. Timely and enlightening, *How to Prepare for Climate Change* is an indispensable guide for anyone who read *The Uninhabitable Earth* or *The Sixth Extinction* and wants to know how to make smart choices for the upheaval ahead.

All Hell Breaking Loose Penguin Press

Winner of the 2019 Phi Beta Kappa Award for Science "A valuable perspective on the most important problem of our time." —Adam Becker, NPR *Light of the Stars* tells the story of humanity's coming of age as we realize we might not be alone in this universe. Astrophysicist Adam Frank traces the question of alien life from the ancient Greeks to modern thinkers, and he demonstrates that recognizing the possibility of its existence might be the key to save us from climate change. With clarity and conviction, *Light of the Stars* asks the consequential question: What can the likely presence of life on other planets tell us about our own fate?

The Future We Choose Simon and Schuster

All Hell Breaking Loose is an eye-opening examination of climate change from the perspective of the U.S. military. The Pentagon, unsentimental and politically conservative, might not seem likely to be worried about climate change—still linked, for many people, with polar bears and coral reefs. Yet of all the major institutions in American society, none take climate change as seriously as the

U.S. military. Both as participants in climate-triggered conflicts abroad, and as first responders to hurricanes and other disasters on American soil, the armed services are already confronting the impacts of global warming. The military now regards climate change as one of the top threats to American national security—and is busy developing strategies to cope with it. Drawing on previously obscure reports and government documents, renowned security expert Michael Klare shows that the U.S. military sees the climate threat as imperiling the country on several fronts at once. Droughts and food shortages are stoking conflicts in ethnically divided nations, with "climate refugees" producing worldwide havoc. Pandemics and other humanitarian disasters will increasingly require extensive military involvement. The melting Arctic is creating new seaways to defend. And rising seas threaten American cities and military bases themselves. While others still debate the causes of global warming, the Pentagon is intensely focused on its effects. Its response makes it clear that where it counts, the immense impact of climate change is not in doubt.

The Future Earth Picador

The untold story of climate migration—the personal stories of those experiencing displacement, the portraits of communities being torn apart by disaster, and the implications for all of us as we confront a changing future. When the subject of migration that will be caused by global climate change comes up in the media or in conversation, we often think of international refugees—those from foreign countries who will emigrate to the United States to escape disasters like rising shorelines and famine. What many people don't realize though, is that climate migration is happening now—and within the borders of the United States. A human-centered narrative with national scope, *The Great Displacement* is the first book to report on climate migration in the US. From half-drowned Louisiana to fire-scorched California, from the dried-up cotton fields of Arizona to the soaked watersheds of inland North Carolina, people are moving. In the last decade alone, the federal government has sponsored the relocation of tens of thousands of families away from flood zones, and tens of thousands more have moved of their own accord in the aftermath of natural disasters. Insurance and mortgage markets are already shifting to reflect mounting climate risk, pushing more people away from their homes. Rising seas have already begun to sink eastern coastal cities, while extreme heat, unprecedented drought, and unstoppable wildfires plague the west. Over the next fifty years, millions of Americans will be caught up in this churn of displacement created by climate change, forced inland and northward in what will be the largest national migration we've yet to experience. *The Great Displacement* compassionately tells the stories of those who are

already experiencing life on the move, while detailing just how radically climate change will transform our lives—forcing us out of the country's hardest-hit areas, uprooting countless communities, and prompting a massive migration that will fundamentally reshape the United States.

The Uninhabitable Earth (Adapted for Young Adults) Penguin

The first hopeful book about climate change, *The Future Earth* shows readers how to reverse the short- and long-term effects of climate change over the next three decades. The basics of climate science are easy. We know it is entirely human-caused. Which means its solutions will be similarly human-led. In *The Future Earth*, leading climate change advocate and weather-related journalist Eric Holthaus ("the Rebel Nerd of Meteorology"—*Rolling Stone*) offers a radical vision of our future, specifically how to reverse the short- and long-term effects of climate change over the next three decades. Anchored by world-class reporting, interviews with futurists, climatologists, biologists, economists, and climate change activists, it shows what the world could look like if we implemented radical solutions on the scale of the crises we face. What could happen if we reduced carbon emissions by 50 percent in the next decade? What could living in a city look like in 2030? How could the world operate in 2040, if the proposed Green New Deal created a 100 percent net carbon-free economy in the United States? This is the book for anyone who feels overwhelmed by the current state of our environment. Hopeful and prophetic, *The Future Earth* invites us to imagine how we can reverse the effects of climate change in our own lifetime and encourages us to enter a deeper relationship with the earth as conscientious stewards and to re-affirm our commitment to one another in our shared humanity.

How to Avoid a Climate Disaster Penguin

In a time of reckoning, this year's National Magazine Awards finalists and winners focus on abuse of power in many forms. Ronan Farrow's Pulitzer Prize-winning revelation of Harvey Weinstein's depredations (*New Yorker*), along with Rebecca Traister's charged commentary for *New York* and Laurie Penny's incisive *Longreads* columns, speak to the urgency of the #MeToo moment. Ginger Thompson's reporting on the botched U.S. operation that triggered a cartel massacre in Mexico (*National Geographic/ProPublica*) and Azmat Khan and Anand Gopal's *New York Times Magazine* investigation of the civilian casualties of drone strikes in Iraq amplify the voices of those harmed by U.S. actions abroad. And Alex Tizon's "My Family's Slave" (*Atlantic*) is a powerful attempt to come to terms with the cruelty that was in plain sight in his own upbringing. Responding to the overt racism of the Trump era, Ta-Nehisi Coates's "My President Was Black" (*Atlantic*) looks back at the meaning of Obama. Howard Bryant (*ESPN the Magazine*) and Bim Adewunmi (*Buzzfeed*) offer incisive

columns on the intersections of pop culture, sports, race, and politics. In addition, David Wallace-Wells reveals the coming disaster of our climate-change-ravaged future (New York); Don Van Natta Jr. and Seth Wickersham's ESPN the Magazine reporting exposes the seamy sides of the NFL; Nina Martin and Renee Montagne investigate America's shameful record on maternal mortality (NPR/ProPublica); Ian Frazier asks "What Ever Happened to the Russian Revolution?" (Smithsonian); and Alex Mar considers "Love in the Time of Robots" (Wired with Epic Magazine). The collection concludes with Kristen Roupenian's viral hit short story "Cat Person" (New Yorker).

Climate Change Henry Holt and Company

"The most honest book about climate change yet." —The Atlantic
 "The Infinite Jest of climate books." —The Baffler
 A timely, eye-opening book about climate change and energy generation that focuses on the consequences of nuclear power production, from award-winning author William T. Vollmann. In his nonfiction, William T. Vollmann has won acclaim as a singular voice tackling some of the most important issues of our age, from poverty to violence to the dark soul of American imperialism as it has played out on the U.S./Mexico border. Now, Vollmann turns to a topic that will define the generations to come—the factors and human actions that have led to global warming. Vollmann begins *No Immediate Danger*, the first volume of *Carbon Ideologies*, by examining and quantifying the many causes of climate change, from industrial manufacturing and agricultural practices to fossil fuel extraction, economic demand for electric power, and the justifiable yearning of people all over the world to live in comfort. Turning to nuclear power first, Vollmann then recounts multiple visits that he made at significant personal risk over the course of seven years to the contaminated no-go zones and sad ghost towns of Fukushima, Japan, beginning shortly after the tsunami and reactor meltdowns of 2011. Equipped first only with a dosimeter and then with a scintillation counter, he measured radiation and interviewed tsunami victims, nuclear evacuees, anti-nuclear organizers and pro-nuclear utility workers. Featuring Vollmann's signature wide learning, sardonic wit, and encyclopedic research, *No Immediate Danger*, whose title co-opts the reassuring mantra of official Japanese energy experts, builds up a powerful, sobering picture of the ongoing nightmare of Fukushima.

Light of the Stars: Alien Worlds and the Fate of the Earth A&C Black

** LONGLISTED FOR THE JAMES CROPPER WAINWRIGHT PRIZE LONGLIST 2022 **
 'Really packs a punch' Aja Barber, author of *Consumed: The Need for Collective Change: Colonialism, Climate Change, and Consumerism* 'Will open the minds of even the most ardent denier of climate change and/or systemic racism. If there's one book that will help you to be an effective activist for climate justice, it's this one.' Dr Shola Mos-Shogbamimu, author of *This is Why I Resist* 'Accessible. Poignant. Challenging.' Nnimmo Bassey, environmentalist and author of *To Cook a Continent: Destructive Extraction and the Climate Crisis in Africa* When we talk about racism, we often mean personal prejudice or institutional biases. Climate change doesn't work that way. It is structurally racist, disproportionately caused by majority White people in majority White countries, with the damage unleashed overwhelmingly on people of colour. The climate crisis reflects and reinforces racial injustices. In this eye-opening book, writer and environmental activist Jeremy Williams takes us on a short, urgent journey across the globe - from Kenya to India, the USA to Australia - to understand how White privilege and climate change overlap. We'll look at the environmental facts, hear the experiences of the people most affected on our planet and learn from the activists leading the change. It's time for each of us to find our place in the global struggle for justice.

The Uninhabitable Earth: @ Columbia University Press

A cautionary but optimistic book about the world's changing climate and the fate of humanity, from Christiana Figueres and Tom Rivett-Carnac—who led negotiations for the United Nations during the historic Paris Agreement of 2015. The authors outline two possible scenarios for our planet. In one, they describe what life on Earth will be like by 2050 if we fail to meet the Paris Agreement's climate targets. In the other, they lay out what it will be like to live in a regenerative world that has net-zero emissions.

They argue for confronting the climate crisis head-on, with determination and optimism. *The Future We Choose* presents our options and tells us what governments, corporations, and each of us can, and must, do to fend off disaster.

Storms of My Grandchildren Oxford University Press

"Everyone needs to understand how climate change will directly affect their lives and the lives of their family in the years to come. This is the first general audience book aimed at giving you and your family the knowledge you need to know to navigate your future"--

No Immediate Danger Rethinking Schools

Finalist for the 2020 PEN / E.O. Wilson Literary Science Writing Award Acclaimed on its hardcover publication, a global journey that reminds us "of how magical the planet we're about to lose really is" (Bill McKibben) With a new epilogue by the author After nearly a decade overseas as a war reporter, the acclaimed journalist Dahr Jamail returned to America to renew his passion for mountaineering, only to find that the slopes he had once climbed have been irrevocably changed by climate disruption. In response, Jamail embarks on a journey to the geographical front lines of this crisis—from Alaska to Australia's Great Barrier Reef, via the Amazon rainforest—in order to discover the consequences to nature and to humans of the loss of ice. In *The End of Ice*, we follow Jamail as he scales Denali, the highest peak in North America, dives in the warm crystal waters of the Pacific only to find ghostly coral reefs, and explores the tundra of St. Paul Island where he meets the last subsistence seal hunters of the Bering Sea and witnesses its melting glaciers. Accompanied by climate scientists and people whose families have fished, farmed, and lived in the areas he visits for centuries, Jamail begins to accept the fact that Earth, most likely, is in a hospice situation. Ironically, this allows him to renew his passion for the planet's wild places, cherishing Earth in a way he has never been able to before. Like no other book, *The End of Ice* offers a firsthand chronicle—including photographs throughout of Jamail on his journey across the world—of the catastrophic reality of our situation and the incalculable necessity of relishing this vulnerable, fragile planet while we still can.

A Brief History of the Earth's Climate Bloomsbury Publishing USA

#1 NEW YORK TIMES BEST SELLER • In this urgent, authoritative book, Bill Gates sets out a wide-ranging, practical—and accessible—plan for how the world can get to zero greenhouse gas emissions in time to avoid a climate catastrophe. Bill Gates has spent a decade investigating the causes and effects of climate change. With the help of experts in the fields of physics, chemistry, biology, engineering, political science, and finance, he has focused on what must be done in order to stop the planet's slide to certain environmental disaster. In this book, he not only explains why we need to work toward net-zero emissions of greenhouse gases, but also details what we need to do to achieve this profoundly important goal. He gives us a clear-eyed description of the challenges we face. Drawing on his understanding of innovation and what it takes to get new ideas into the market, he describes the areas in which technology is already helping to reduce emissions, where and how the current technology can be made to function more effectively, where breakthrough technologies are needed, and who is working on these essential innovations. Finally, he lays out a concrete, practical plan for achieving the goal of zero emissions—suggesting not only policies that governments should adopt, but what we as individuals can do to keep our government, our employers, and ourselves accountable in this crucial enterprise. As Bill Gates makes clear, achieving zero emissions will not be simple or easy to do, but if we follow the plan he sets out here, it is a goal firmly within our reach.

The Great Displacement The New Press

'One of the most important books I've read this year. How Are We Going To Explain This? is a crystal clear treatise on where we are, and what we need to do right now. Especially recommended for those who feel hopeless.' Rutger Bregman, author of *Utopia for Realists* 'At a time when despair, malign fabrication and partisanship are combining to prevent vital action, *How Are We Going To Explain This* is a much-needed, joyful, clear and practical companion. Read this - it could save your planet. Give it to your friends and colleagues - it's their planet, too.' A.L. Kennedy 'Shines a light on the path forward with clarity and determination.' Christiana Figueres Architect of the Paris climate agreement, Executive Secretary of the United Nations Framework Convention on Climate Change (UNFCCC) 2010-2016 'As more of humanity adjusts to living with crises - we need books like this, which tell us what we can do - from small steps to big ones - to find our way to a new normal.' May Boeve, Executive Director 350.org and 350 Action Fund THE INTERNATIONAL BESTSELLER 'There's a new story in the making, one in which the consequences of our actions add up - and every contribution is meaningful.' If climate change is the biggest threat humanity has ever faced, then why are we doing so little? Will the corona pandemic make it worse or better? And where do we go from here? Drawing on the latest climate science, Jelmer Mommers helps you find hope in the midst of the climate crisis. He describes how we got here, what possible futures await us, and how you can help to truly make a difference. 'As a journalist, Jelmer Mommers has broken important stories

about how we got in our current climate mess; as a thinker, he shows us there may still be some ways out, if we move with grace and speed. A fine account of where we stand, and where we could go if we wanted to!' Bill McKibben, author, environmentalist, activist and founder of 350.org 'Climate change is a story so often told in the future tense. But Mommers roots it firmly in the present. The problem, the consequences and the solution - right here, right now.' Leo Hickman, editor of *Carbon Brief*
Summary of The Uninhabitable Earth by David Wallace-Wells Icon Books

An exploration of the devastating effects of global warming—current and future—adapted for young adults from the #1 New York Times bestseller. This is not only an assessment on how the future will look to those living through it, but also a dire overview and an impassioned and hopeful call to action to change the trajectory while there is still time. The climate crisis that our nation currently faces, from rising temperatures, unfathomable drought, devastating floods, unprecedented fires, just to name a few, are alarming precursors to what awaits us if we continue on our current path. In this adaptation for young adults from the #1 New York Times bestseller, journalist David Wallace-Wells tells it like it is, and it is much worse than anyone might think. Global warming is effecting the world, if left unchecked, it promises to transform global politics, the meaning of technology and the trajectory of human progress. In sobering detail, Wallace-Wells lays out the mistakes and inaction of past and current generations that we see negatively affecting all lives today and more importantly how they will inevitably affect the future. But readers will also hear—loud and clear—his impassioned call to action, as he appeals to current and future generations, especially young people. As he states: “the solutions, when we dare to imagine them . . . are indeed motivating, if there is to be any chance of preserving even the hope for a happier future—relatively livable, relatively fulfilling, relatively prosperous, and perhaps more than only relatively just.”

The Songs of Trees Tim Duggan Books

Industrial civilisation has no future. It requires limitless economic growth on a finite planet. The reckless combustion of fossil fuels means that Earth's climate is changing disastrously, in ways that cannot be resolved by piecemeal reform or technological innovation. Sooner rather than later this global capitalist system will come to an end, destroyed by its own ecological contradictions. Unless humanity does something beautiful and unprecedented, the ending of industrial civilisation will take the form of collapse, which could mean a harrowing die-off of billions of people. This book is for those ready to accept the full gravity of the human predicament - and to consider what in the world is to be done. How can humanity mindfully navigate the inevitable descent ahead? Two critical thinkers here remove the rose-tinted glasses of much social and environmental commentary. With unrelenting realism and yet defiant positivity, they engage each other in uncomfortable conversations about the end of Empire and what lies beyond.

Global Climate Change ZIP Reads

I love it. Earle understands the big climate picture and paints it with exceptional clarity. — JAMES HANSEN, director, Climate Science, Awareness and Solutions, Columbia University Earth Institute What's natural, what's caused by humans, and why climate change is a disaster for all A Brief History of the Earth's Climate is an accessible myth-busting guide to the natural evolution of the Earth's climate over 4.6 billion years, and how and why human-caused global warming and climate change is different and much more dangerous. Richly illustrated chapters cover the major historical climate change processes including evolution of the sun, plate motions and continental collisions, volcanic eruptions, changes to major ocean currents, Earth's orbital variations, sunspot variations, and short-term ocean current cycles. As well as recent human-induced climate change and an overview of the implications of the COVID pandemic for climate change. Content includes: Understanding natural geological processes that shaped the climate How human impacts are now rapidly changing the climate Tipping points and the unfolding climate crisis What we can do to limit the damage to the planet and ecosystems Countering climate myths peddled by climate change science deniers. A Brief History of the Earth's Climate is essential reading for everyone who is looking to understand what drives climate change, counter skeptics and deniers, and take action on the climate emergency. AWARDS SILVER | 2022 IPPY Awards - Science
Losing Earth New Society Publishers

A People's Curriculum for the Earth is a collection of articles, role plays, simulations, stories, poems, and graphics to help breathe life into teaching about the environmental crisis. The book features some of the best articles from *Rethinking Schools* magazine alongside classroom-friendly readings on climate change, energy, water, food, and pollution—as well as on people who are working to make things better. A People's Curriculum for the Earth has the breadth and depth of *Rethinking Globalization: Teaching for Justice in an Unjust World*, one of the most popular books we've published. At a time when it's becoming increasingly obvious that life on Earth is at risk, here is a resource that helps students see what's wrong and imagine solutions. Praise for A

People's Curriculum for the Earth "To really confront the climate crisis, we need to think differently, build differently, and teach differently. A People's Curriculum for the Earth is an educator's toolkit for our times." — Naomi Klein, author of *The Shock Doctrine* and *This Changes Everything: Capitalism vs. the Climate* "This volume is a marvelous example of justice in ALL facets of our lives—civil, social, educational, economic, and yes, environmental. Bravo to the Rethinking Schools team for pulling this collection together and making us think more holistically about what we mean when we talk about justice." — Gloria Ladson-Billings, Kellner Family Chair in Urban Education, University of Wisconsin-Madison "Bigelow and Swinehart have created a critical resource for today's young people about humanity's responsibility for the Earth. This book can engender the shift in perspective so needed at this point on the clock of the universe." — Gregory Smith, Professor of Education, Lewis & Clark College, co-author with David Sobel of *Place- and Community-based Education in Schools*
[Climate Leviathan](#) Simon & Schuster
 Thirty years ago Bill McKibben offered one of the earliest warnings about climate change. Now he broadens the warning: the entire human game, he suggests, has begun to play itself out. Bill McKibben's groundbreaking book *The End of Nature* -- issued in dozens of languages and long regarded as a classic -- was the first book to alert us to global warming. But the danger is broader than that: even as climate change shrinks the space where our

civilization can exist, new technologies like artificial intelligence and robotics threaten to bleach away the variety of human experience. Falter tells the story of these converging trends and of the ideological fervor that keeps us from bringing them under control. And then, drawing on McKibben's experience in building 350.org, the first truly global citizens movement to combat climate change, it offers some possible ways out of the trap. We're at a bleak moment in human history -- and we'll either confront that bleakness or watch the civilization our forebears built slip away. Falter is a powerful and sobering call to arms, to save not only our planet but also our humanity.

A Life on Our Planet HarperCollins

"This book's great service is that it challenges us to consider the ways in which our institutions and systems, and the assumptions, positions and divisions that undergird them, leave us ill prepared for the next crisis."—Robert Rubin, *The New York Times* Book Review "Full of valuable insight and telling details, this may well be the best thing to read if you want to know what happened in 2020." --Paul Krugman, *New York Review of Books* Deftly weaving finance, politics, business, and the global human experience into one tight narrative, a tour-de-force account of 2020, the year that changed everything--from the acclaimed author of *Crashed*. The shocks of 2020 have been great and small, disrupting the world economy, international relations and the daily lives of virtually everyone on the planet. Never before has the entire world economy contracted by 20 percent in a matter of weeks nor in the

historic record of modern capitalism has there been a moment in which 95 percent of the world's economies were suffering all at the same time. Across the world hundreds of millions have lost their jobs. And over it all looms the specter of pandemic, and death. Adam Tooze, whose last book was universally lauded for guiding us coherently through the chaos of the 2008 crash, now brings his bravura analytical and narrative skills to a panoramic and synthetic overview of our current crisis. By focusing on finance and business, he sets the pandemic story in a frame that casts a sobering new light on how unprepared the world was to fight the crisis, and how deep the ruptures in our way of living and doing business are. The virus has attacked the economy with as much ferocity as it has our health, and there is no vaccine arriving to address that. Tooze's special gift is to show how social organization, political interests, and economic policy interact with devastating human consequences, from your local hospital to the World Bank. He moves fluidly from the impact of currency fluctuations to the decimation of institutions--such as health-care systems, schools, and social services--in the name of efficiency. He starkly analyzes what happened when the pandemic collided with domestic politics (China's party conferences; the American elections), what the unintended consequences of the vaccine race might be, and the role climate change played in the pandemic. Finally, he proves how no unilateral declaration of "independence" or isolation can extricate any modern country from the global web of travel, goods, services, and finance.
