 This book investigates the nature of the alphabet as a medium of communication. The general thesis is that writing is not a merely transparent or empty item like air or glass; rather, the alphabet is both modifier and enabler of meaning itself: The book investigates the general implications of this thesis.

Cravings: Hungry for More takes us further into Chrissy's kitchen . . . and life. It's a life of pancakes that remind you of blueberry pie, eating onion dip with your glam squad, banana bread that breaks the internet, and a little something called Pad Thai Carbonara. After two years of parenthood, falling in love with different flavors, and relearning the healing power of comfort food, this book is like Chrissy's new edible diary: • recipes for quick-as-a-snap meals (Pan-Seared Fish with Herby Browned Butter; Jalapeño Parmesan-Crusted Grilled Cheese) • recipes for lighter, brighter, healthier-ish living (Roasted Carrot and Avocado Salad with Lime Dressing; Vegetable Noodles with Parm & Basil) • recipes that, well, are gonna put you to bed, holding your belly (Skillet Peanut Butter Chocolate Chip Blondies; Sleepytime Stew & Cream Cheese Smashed Potatoes) And all of these delicious meals will have you hungry for more.

This book presents essential research on a class of environmentally friendly alkylphosphonate herbicides. This class of herbicides acted as a competitive inhibitor of the pyruvate dehydrogenase complex (PDHc) to control weeds. The bioreasoning and systematic approach, from basic research to field tests of candidate compounds, are introduced. The basic research covers the molecular design, chemical synthesis, biological activities evaluation, structure-activity relationship analysis and structural optimization. Subsequently, the book reviews the biochemistry of PDHc inhibitors, the selectivity between mammals and plants, and the mechanism of herbicidal activity of novel alkylphosphonates as selective PDHc inhibitors. Field trials for selected alkylphosphonate candidates as herbicides are also included. This book provides a sound basis for the rational design and development of novel herbicides as effective PDHc inhibitors with good enzyme-selective inhibition of plant PDHc between mammals and plants. These studies take full advantages of the low toxicity and low residual impact of selective PHDc inhibitors to design an effective and environmentally friendly herbicide. This book is based on twenty years of research on alkylphosphonates and phosphorus-containing PDHc inhibitors, and demonstrates how to develop

these PDHc inhibitors as an effective and "green" herbicide candidate. Hong-Wu He, PhD, is a Professor at the Key Laboratory of Pesticide & Chemical Biology, Ministry of Education of China, and Director of the Institute of Pesticide Chemistry, College of Chemistry, Central China Normal University, China.
