Banking Regulations for Examiners

Claitor's Law Publishing

The global financial crisis evidenced the corrosive effects of unethical behaviour upon the banking industry. The recurrence of misbehaviour in the financial sector, including fraud and manipulations of market indices, suggests the need to establish a banking culture that conforms to the highest standards of ethical and professional behaviour. This Research Handbook on

Law and Ethics in Banking and Finance focuses on the role that law should play and the effectiveness of newly introduced regulations and supervisory actions as a driver for ethical conduct so as to reconnect the interests of bankers and financiers with the interests of society.

Banking Regulation in Israel

Title 12, Banks and Banking, Parts 220-229

Self-assessment and Regulatory Compliance Review Claitor's Law Publishing

The Committee on Financial System (CFS), popularly known as Narasimham Committee, was set up in 1991 to make recommendations for bringing about the

necessary reforms in the financial sector. Narasimham Committee appraised and acknowledged the success and progress of Indian banks since the major banks were nationalized on 19 July 1969. Unfortunately, the developments were witnessed only in the field of expansion and spread of bank branches, generation of huge employment and mobilization of savings rather than also in improvement in efficiency. Besides, corruption, fraud, misutilization in public money, outdated technology, and politicization in policy making were found to be major drawbacks in the real progress of the banks. As the banking sector plays an important and crucial role in the economy of a country for its stabilization and balanced growth, major reforms were urgently needed, after 22 years of

nationalization, to revive Indian banks. This was not only in the field of profitability, but also in the overall efficiency, viz., better management of non-performing assets (NPAs), satisfying capital requirements, increased cost effectiveness and control, enhanced customer service, improved technology, establishing competitive interest rate, effective man-power planning, introduction of asset-liability management, better productivity, launching new products, and becoming more competent to face the upcoming challenges and competition from foreign as well as private sector banks in the era of globalization and liberalization. The objectives of the study are to examine the need and relevance of reforms in Indian banks, to assess the efficiency

and profitability of Indian banks during reforms from different perspectives, to discuss various issues of NPA management in the light of reforms, to measure the performance of the banks of West Bengal during the reforms, to analyse the role of information technology and its relevancy in Indian banks in the era of reforms, and to impart necessary suggestions for the improvement of the efficiency and profitability of Indian banks.

Ever since the industrial revolution, large

numbers of environmentally hazardous materials are introduced into the global environment annually; a list of all substances which are at present regarded as environmentally hazardous might contain thousands of compounds, and new substances are still being added. Several major activities are necessary to adequately ensure the protection of human health and the environment from the often subtle effects of these materials. These activities include toxicological and ecological research, control technology development, the promulgation of regulatory guidelines and standards, and the monitoring of environmental materials and specimen banking. In the absence of effective monitoring environmental materials and specimen

banking, the detection of serious environmental contamination from pollutants may occur only after critical damage has been done. Environmental problems are independent of national boundaries and international collaborative programmes should be encouraged. Sponsoring organisations and other international and national bodies should encourage monitoring and specimen bank programmes and develop harmonised systems for data acquisition and evaluation. An international pilot programme of monitoring and specimen banking is needed and is technically feasible. The conclusions and recommendations, for both implementation and research, should be of interest to other international and national bodies in

addition to the three organisations sponsoring this International Workshop. Nevertheless this joint sponsorship should help to assure that the resulting conclusions and recommendations will have a worldwide audience and that effective coordination of existing programmes will be possible.

2018 CFR Annual Print Title 12, Banks and Banking, Parts 220-229 Walter de Gruyter GmbH & Co KG

Employee training has been identified as an important factor in the survival of banking business, particularly in a globally competitive economy with uncertainty as in Nigeria. The Nigerian banking industry faces a number of challenges in relation to employee development. This study investigated the effects of training and manpower

development on employee performance in Nigerian banking industry. The survey research design was used. The population of the study comprised 30,006 employees in the Nigerian banking industry from which a sample of 379 respondents was selected using purposive sampling technique. The population was broken into various strata in line with the hierarchy of office seniority. The study concluded that there is need for the Nigerian banking industry to adopt manpower training as an innovative tool for improving employee performance in today's dynamic banking environment.

Code of Federal Regulations, Title 12, Banks and Banking, PT. 1-199, Revised as of January 1, 2010 Government Printing Office

The current banking crisis has tested every dimension of banking and created maximum uncertainty for its future - yet banks must plan for this future. Author of a number of books on best practice in bank management, Steven Davis has interviewed 25 senior bank executives, management consultants, regulators, rating agencies and analysts to understand how the strategies of the leading banks might evolve in the future. Its unique research, case studies of success, and conclusions for the future should be of interest to senior bank management as well as their advisors, regulators and analysts.

In the aftermath of the 2008 global financial crisis, many governments are seeking ways to improve their banking regulation systems in the interests of both economic health and consumer protection. Among the globally competitive countries that withstood the crisis with no significant disruption, Israel stands out, suggesting that other

countries might benefit from an in-depth analysis of its banking system. This is the first book in English to provide such an analysis, emphasizing the crucial balance between prudential regulation and conduct of business regulation, which in Israel are both regulated by the same agency, unlike the 'Twin Peaks' model that prevails in other market-based economies. With recommendations that are highly applicable to many countries, the book examines a broad range of issues that are of current concern to the banking community worldwide. Among these issues are the following: - the architecture of financial regulation; - nationalization and privatization of banks; - conflicts of interest in the banking system resulting from universal

banking; - problems of concentration and lack of competitiveness in the banking system; - the growing power of institutional investors and their entry into traditional banking activities; - mechanisms for recovery and resolution in the event of a bank failure; - new models of banking regulation, such as self-regulation and contractual regulation; and - bank consumer protection, complaint handling and redress. Even though the book focuses on Israeli banking regulation, its detailed attention to the development of a suitable supervisory model is of immeasurable international value for regulators, lawyers, bankers, academics, and business people who are in any way connected to the banking world; particularly following the 2008 crisis and

its devastating effects. It is sure to be of service as many jurisdictions continue to search for optimal tools designed to prevent another such crisis.

Banking Associations, as business associations representing the interests of its members (banks) at the national level, in today's changing regulatory and

economic environment have an increasingly important role not only in the Banking sector but in the wider economy. Their increasing importance is deriving from their mission, structure and capabilities to obtain and promote different interests in the economy and wider society. It is important to understand their mission, vision and activities and ideally to include Banking Associations in the market decision making process. Countries where that had previously been the case were observed to achieve a higher level of mutual understanding of different stakeholders, and thereby produced greater value-added.

This book reflects on the innovations that central banks have introduced since the 2008 collapse of Lehman Brothers to improve their modes of intervention, regulation and resolution of financial markets and financial institutions.

Authors from both academia and policy circles explore these innovations through four approaches: 'Bank Capital Regulation' examines the Basel III agreement; 'Bank Resolution' focuses on effective regimes for regulating and resolving ailing banks; 'Central Banking with Collateral-Based Finance' develops thought on the challenges that market-based finance pose for the conduct of central banking; and 'Where Next for Central Banking' examines the trajectory of central banking and its new, central

role in sustaining capitalism.
