Encyclopedia of Library and Information Science CRC Press

This book explores the history of Library and Information Science (LIS) across non-English speaking European countries, including France, ex-Yugoslavia, Denmark, Sweden, Norway, Spain and Portugal.

Author's Guide to Journals in Library & Information Science Bloomsbury Publishing USA

A revitalized version of the popular classic, the Encyclopedia of Library and Information Science, Second Edition targets new and dynamic movements in the distribution, acquisition, and development of print and online media-compiling articles from more than 450 information specialists on topics including program planning in the digital era, recruitment, information management, advances in digital technology and encoding, intellectual property, and hardware, software, database selection and design, competitive intelligence, electronic records preservation, decision support systems, ethical issues in information, online library instruction, telecommuting,

and digital library projects.

ALA Glossary of Library and Information Science, Fourth Edition American Library Association Vol. 73: index to v. 48-72.

Dictionary for Library and Information Science Bloomsbury Publishing USA

The only book currently available that comprehensively integrates research and evaluation for evidence-based library and information science practice. Numerous books cover research and evaluation in general, but not within the context of library and information science. Many others cover the field of library and information science overall but with little focus on research. Knowledge into Action: Research and Evaluation in Library and Information Science offers in a single volume, an expert introduction to these two distinct, yet deeply interrelated, phases of information-gathering as they are practiced in the information sciences. Knowledge into Action takes readers through the core principles, working processes, and practical tools for conducting and evaluating research in library and information science, enhancing the presentation with examples, informational graphics, study questions, and exercises directly relevant to this field. It is a welcomed resource for students and scholars who want to use appropriate techniques for

gathering and assessing research, as well as information professionals looking to improve services at their libraries or information centers. The book is also designed to educate practitioners as consumers of the research and evaluation literature and as active participants in professional conferences, meetings, and workshops.

Social Justice Design and Implementation in Library and Information Science presents a range of case studies that have successfully implemented social justice as a designed strategy to generate community-wide changes and social impact. Each chapter in the collection presents innovative practices that are strategized as intentional, deliberate, systematic, outcome-based, and impact-driven. They demonstrate effective examples of social justice design and implementation in LIS to generate meaningful outcomes across local, regional, national, and international settings. Including reflections on challenges and opportunities in academic, public, school, and special libraries, museums, archives, and other information-related settings, the contributions present forward-looking strategies that transcend historical and outdated notions of neutral stance and passive bystanders. Showcasing the intersections of LIS concepts and interdisciplinary theories

with traditional and non-traditional methods of research and practice, the volume demonstrates how to further the social justice principles of fairness, justice, equity/equality, and empowerment of all people, including those on the margins of society. Social Justice Design and Implementation in Library and Information Science will be of great interest to LIS educators, scholars, students, information professionals, library practitioners, and all those interested in integrating social justice and inclusion advocacy into their information-related efforts to develop impact-driven, externally focused, and community-relevant outcomes.

The only things librarians seem to encounter more often than acronyms are strings of jargon and arcane technical phrases—and there are so many floating around that even just reading an article in a professional journal can bewilder experienced librarians, to say nothing of those new to the profession! Featuring thousands of revised and brand new entries, the fourth edition of ALA Glossary of Library and Information Science presents a thorough yet concise guide to the specific words that describe the materials, processes and systems relevant to the field of librarianship. A panel of experts from across the LIS world have thoroughly updated the glossary to include the latest technology- and internet-related terms, covering metadata, licensing, electronic resources, instruction, assessment, readers' advisory, and electronic workflow. This book will become an essential part of every library's and librarian's reference collection and will also be a blessing for LIS students and recent graduates.

To determine the current and future competencies required by librarians and information professionals, a project was undertaken to meet the following objectives: set forth an idealized framework to be used by the librarian and information professional community; determine a first set of competencies which are validated in the workplace to some extent; establish initial education and training requirements; initiate a process for communication among the principal librarians and information professional participants which can be continued after project completion; and describe steps that can be taken in the future to ensure continuation of the competency achievement cycle. To meet these objectives, substantial input was obtained from a large number of organizations, educators, employers, professional societies, and individual professionals. The study results are presented in a six-chapter report and five appendices. Report chapters comprise: Overview of the Project; A Framework for Describing Librarian and Information Professional Competencies; Methods; Information Workers and Librarians and Information Professionals; Librarian and Information Professional Competencies; and Educational Requirements and Implications. Appendices include a literature review; secondary analyses (including analyses of information professional and librarian vacancy announcements); an example of the relationships between competencies, performance, effectiveness, and value in three special libraries; a bibliography; and an annotated bibliography. Twelve supplementary volumes provide detailed descriptions of competencies for the following positions: (1) Academic Librarian; (2) Public Librarian; (3) School Librarian; (4) Special Librarian; (5) Database Producer; (6) Database Distributor/Service; (7) Information Center/Clearinghouse; (8) Records and Information Manager; (9) Archivist/Museum; (10) Information Analysis Center; (11) Information Service Company; and (12) Library System Supplier. This book explores how digital culture is transforming museums in the 21st century. Offering a corpus of new evidence for readers to explore, the authors trace the digital evolution of the museum and that of their audiences, now fully immersed in digital life, from the Internet to home and work. In a world where life in code and digits has redefined human information behavior and dominates daily activity and communication, ubiquitous use of digital tools and technology is radically changing the social contexts and purposes of museum exhibitions and collections, the work of museum professionals and the expectations of visitors, real and virtual. Moving beyond their walls, with local and global communities, museums are evolving into highly dynamic, socially aware and relevant institutions as their connections to the global digital ecosystem are strengthened. As they adopt a visitor-centered model and design visitor experiences, their priorities shift to engage audiences, convey digital collections, and tell stories through exhibitions. This is all part of crafting a dynamic and innovative museum identity of the future, made whole by seamless integration with digital culture, digital thinking, aesthetics, seeing and hearing, where visitors are welcomed participants. The international and interdisciplinary chapter contributors

include digital artists, academics, and museum professionals. In themed parts the chapters present varied evidence-based research and case studies on museum theory, philosophy, collections, exhibitions, libraries, digital art and digital future, to bring new insights and perspectives, designed to inspire readers. Enjoy the journey!

"The Encyclopedia of Library and Information Science provides an outstanding resource in 33 published volumes with 2 helpful indexes. This thorough reference set--written by 1300 eminent, international experts--offers librarians, information/computer scientists, bibliographers, documentalists, systems analysts, and students, convenient access to the techniques and tools of both library and information science. Impeccably researched, cross referenced, alphabetized by subject, and generously illustrated, the Encyclopedia of Library and Information Science integrates the essential theoretical and practical information accumulating in this rapidly growing field."

Case Studies in Library and Information Science Ethics American Library Association

The first of its kind, this book provides a theoretically informed research guide and draws attention to areas of potential research in Library and Information Science. It explores the nexus of theory and practice and offers suggestions for collaborative projects. The clear text, simple style and rich content make the book an invaluable resource for students, scholars and practicing librarians, as well as the general reader who may be interested in library and information science research. Apart from providing basic research tools, it acquaints librarians with a theoretical compass for dealing with digital media. It pays particular attention to the electronic media. Addresses topics of current interests in the field, such as user-centered services

Continuing Library and Information Science Education Chicago : American Library

Association

This valuable book, written specifically for library and information science professionals, presents 125 case studies that combine theories of ethics and librarianship with practical, real-life scenarios. After an introduction to ethics in library and information science, chapters are devoted to ethical issues in five categories: intellectual freedom, privacy, intellectual property, professional ethics, and intercultural information ethics. Each chapter has a theoretical introduction to the issue under consideration followed by 25 case studies, each of which includes its own set of discussion questions. Perfectly suited to classroom use, these case studies help bridge the complicated gap between students, academics, and practitioners in the field by promoting critical thinking and responsible action. Instructors considering this book for use in a course may request an examination copy here.

This dictionary is an english-language resource for terminology used in all types of libraries. With more than 4,000 terms and cross-references, the dictionary's content has been carefully selected and includes terms from publishing, printing, literature, and computer science.

Introduction to Information Science Foundations of Library and Information Science Begins with a discussion of the practice of librarianship and moves on to address the place of libraries within the broader perspective of the information superstructure, the development of information science, the growth of information technologies, information policy in libraries, intellectual organization of

libraries (from classification systems to databases), the mission of libraries from past to present, and ethical aspects and principles between information providers and clients. The various types of libraries (public, academic, school, and special), their internal functions, and the major organizational issues they face are discussed. This comprehensive text contains an extensive list of selected readings. Appendixes include the Association of Research Libraries Statement on Intellectual Property; Development of the National Information Infrastructure; a bill of rights and responsibilities for electronic learners; major periodicals, indexes, encyclopedias and dictionaries in library and information science; and a listing of associations. The seventh edition of this frequently adopted textbook features new or expanded sections on social justice research, data analysis software, scholarly identity research, social networking, data science, and data visualization, among other topics. It continues to include discipline experts' voices. The revised seventh edition of this popular text provides instruction and guidance for professionals and students in library and information science who want to conduct research and publish findings, as well as for practicing professionals who want a broad overview of the current literature. Providing a broad introduction to research design, the authors include principles, data collection techniques, and analyses of quantitative and qualitative methods, as well as advantages and limitations of each method and updated bibliographies. Chapters cover the scientific method,

sampling, validity, reliability, and ethical concerns along with quantitative and qualitative methods. LIS students and professionals will consult this text not only for instruction on conducting research but also for guidance in critically reading and evaluating research publications, proposals, and

reports. As in the previous edition, discipline experts provide advice, tips, and strategies for completing research projects, dissertations, and theses; writing grants; overcoming writer's block;

collaborating with colleagues; and working with outside consultants. Journal and book editors discuss how to publish and identify best practices and understudied topics, as well as what they look for in submissions.
