The captivating watercolors of James Prosek, the artist the New York Times calls "the Audubon of the fishing world." In the tradition of his acclaimed Trout: An Illustrated History, renowned naturalist, artist, and fisherman James Prosek captures thirty-five of the most pursued game fish—from striped bass to tarpon, swordfish to bonefish—as well as many creatures that share these marine ecosystems through rich, highly detailed watercolors painted specifically for this volume. Each painting reflects Prosek's individual experience with a single fish. The artist traveled the world to experience firsthand each species just out of the water before the fish lose their true colors. The original works are life-

size portraits (from a 14-inch porgy to a 12?-foot blue marlin), and details from the originals are reproduced at full size to give a sense of scale. This book is a must-have for saltwater anglers, conservationists, art lovers, and anyone passionate about the beauty of the coastline and the mysteries swimming off its shores.

Flycasting is a skill of almost mythic proportions. Yet discussions of casting often bog down in a world of technical minutiae that is almost impenetrable to the beginner. Now, in *The Essence of*

Flycasting, Mel Krieger has created a clear, indispensable manual for anglers of all skill levels. Through detailed instructions and dozens of precise photographs, Krieger dissects this arcane art into understandable and executable steps that take the raw beginner from piles of line on the ground to graceful loops in the air. And the seasoned veteran will advance from struggling with 30-foot casts to skillfully double-hauling vastly more line across the water. Book jacket.

Olive the Little Woolly Bugger

For years, the Dutch oven has been popular on the grill and barbecue scene, and cooking with the "black pots" over an open fire has become a fashionable cult; it is a symbol of the Wild West, freedom and adventure. Bothe shows you how to cook over open flames in a Dutch oven, from roasts and casseroles to desserts and breads.

The Benchside Introduction to Fly Tying

From the Oxus trout of eastern

Afghanistan to the small golden brown trout of British chalk streams, Prosek has dedicated his unique painting talent to bringing to life trout from around the world.

The Essence of Flycasting

In the past few decades, scientists of human nature—including experimental and cognitive psychologists, neuroscientists, evolutionary theorists, and behavioral economists—have explored the way we arrive at moral judgments. They have called into question commonplaces about character and offered troubling explanations for various moral intuitions. Research like this may help explain what, in fact, we do and feel. But can it tell us what we ought to do or feel? In *Experiments in Ethics*, the philosopher Kwame Anthony

Appiah explores how the new empirical moral psychology relates to the age-old project of philosophical ethics. Some moral theorists hold that the realm of morality must be autonomous of the sciences; others maintain that science undermines the authority of moral reasons. Appiah elaborates a vision of naturalism that resists both temptations. He traces an intellectual genealogy of the burgeoning discipline of "experimental philosophy," provides a balanced, lucid account of the work being done in this controversial and increasingly influential field, and offers a fresh way of thinking about ethics in the classical tradition. Appiah urges that the relation between empirical research and morality, now so often antagonistic, should be seen in terms of dialogue, not

contest. And he shows how experimental philosophy, far from being something new, is actually as old as philosophy itself. Beyond illuminating debates about the connection between psychology and ethics, intuition and theory, his book helps us to rethink the very nature of the philosophical enterprise.
