Christine Stock, Rafael Ortega, Sam R. Sharar, Natalie F. Holt, Christopher W. Connor, and Naveen Nathan, provides insightful coverage of pharmacology, physiology, co-existing diseases, and surgical procedures. This award-winning text delivers state-of-the-art content unparalleled in clarity and depth of coverage, as well robust multimedia features that equip you to effectively apply today's standards of care and make optimal clinical decisions on behalf of your patients.

Medical Equipment Service Manual Springer Science & Business Media

Written both for family and friends as well as for anesthesiologists and anesthesia researchers, *Autobiography of a Persistent Anesthesiologist* is the fascinating story of the life and accomplishments of Dr. Edmond I. "Ted" Eger II in his own words. Both conversational and educational, this unique volume covers the family history, training, and storied career of a remarkable man and esteemed anesthesiologist and researcher. Family stories, a love of mountain climbing, and personal life events are conveyed in an informal style as if the reader is having a conversation with the author; scientific topics such as MAC, pharmacokinetics, and mechanisms of anesthetic action are covered in a precise, detailed manner intended to deepen readers' understanding of the clinical concepts that govern inhaled anesthetic pharmacology, making them easier to understand and incorporate into practice. In this autobiography, the science of anesthetic pharmacology is inseparable from other aspects of Dr. Eger's story—just as it was in his life.

Understanding Anesthetic Equipment & Procedures Elsevier Health Sciences

The editor of Skin Cancer Management: A Practical Approach, Dr. Deborah MacFarlane, gathers experts in selected techniques related to the assessment and management of skin cancer and has them critically review the existing literature in light of their considerable experience delivering care. The authors make recommendations for the best way to perform procedures. The tables provided in each chapter then become a manual of how to perform these procedures, and may in time be adopted by the wider universe of dermatologists as the standard of performance. The detailed descriptions of technique and treatment pearls lead the novice through the sequence of events in a way that instills confidence in their ability to safely perform the procedure. An example of the painstaking explanations is found in Chapter 5, Intralesional and Perilesional Treatment of Skin Cancers. The reader is advised to place eye protection on the patient and those performing the injection of methotrexate into a keratoacanthoma with a central crust. Rest assured that there will be a spray or stream of methotrexate emitted from the crusted area. Having eye protection will prevent methotrexate from accidentally getting into someone's eye. Since we all learn to assimilate new information by taking action on the recommendations that we read, it would be a good idea for the physician to create, where relevant, a checklist for each procedure in the text. The checklist can be given to the office staff to set up the equipment for the procedure.

La obra responde de manera rápida y eficaz a más de 220 problemas relacionados con la anestesia. La presente edición, que está completamente revisada y actualizada, aborda cuestiones de vital

importancia en preanestesia, problemas preoperatorios, resucitación, casos especiales, periodo postoperatorio, etc. Asimismo, cuenta con multitud de algoritmos que permiten acceder a la información que se necesita de forma rápida y que ayudan a resolver las dudas sobre problemas relacionados con las técnicas que utilizan los especialistas en anestesiología. El objetivo de este libro es presentar todo el proceso perioperatorio a través de algoritmos. No pretende sustituir a los textos de referencia en la especialidad, sino ayudar a comprender y utilizar la información que contiene estas obras. Su estructura obliga al lector, en todo momento, a pensar de forma sistemática y a seguir un proceso lógico, que va desde el estudio y la preparación del paciente antes de la intervención (preoperatorio), la supresión del dolor y la vigilancia de las constantes vitales durante la cirugía (intraoperatorio), y la continuación de estos cuidados una vez finalizada la intervención, hasta que el paciente está en condiciones de volver a la sala de hospitalización (postoperatorio). Los autores, Bready, Noorily y Dillman, además de aportar su experiencia como anestesiólogos, son profesores muy involucrados en cursos y programas universitarios, por lo que la obra es de gran interés para los residentes de Anestesiología y especialistas en este campo en sus primeros años de práctica clínica.
