Prof. van Wee draws on extensive research and nearly three decades of professional experience to shine a welcome spotlight on a neglected yet critical area of transportation research and practice: the role of ethics in the ex ante evaluation of infrastructure projects and transportation policies. Aiming more to raise questions and provoke thought than to provide answers, his balanced and systematic treatment of the subject makes the book an invaluable resource one which should be on the shelves and (more importantly) in the minds of every transportation policymaker, planner, and modeler. Patricia L. Mokhtarian, University of California, Davis, US This book on transport ethics fills a clear gap in the literature. Many researchers and practitioners in the transport field are aware that transport policies have important ethical dimensions, but these have not been systematically explored in the literature. Bert van

Wee did a great job by bringing transport and ethics together. His decision to focus on ex ante evaluations of transport policies works out very well, since it enables him to achieve considerable depth on a theme that might otherwise be too broad. Piet Rietveld, Free University, Amsterdam, The Netherlands Transport impacts on all aspects of our lives and businesses, but the inclusion of ethics is not seen as a central concern. This book fills a major gap in the literature, through its understanding of the many important dimensions of ethics and its treatment of a range of situations in transport, through asking about the why, what and how as it relates to ethics. The clear conclusion is reached that ethics should feature much more prominently in all transport decisions, but that it is also context specific in both time and space. The approach adopted is transparent and informative, and the author guides the reader through the main conceptual and theoretical issues, using examples to illustrate the range of important ethical choices raised in the evaluation of transport

policies and practices. David Banister, University of Oxford, UK This insightful book discusses the use of Cost Benefit Analysis (CBA) for transport policy options from an ethical perspective. Each detailed chapter deals with issues such as; the use and ethical aspects of CBA in transport, social exclusion, the environment and long term sustainability, safety, ethics of research and modelling transport. It summarizes ethics-based critics on CBA and discusses their relevance for accessibility, the environment and safety. In addition it explores ethical dilemmas of doing CBAs and CBA related research. The book concludes with possible avenues for furthering exploring the links between transport and ethics. Transport and Ethics will appeal to researchers in the area of CBA for transport, postgraduate and undergraduate students in transport economics, transport policy, transport planning and transport geography, as well as policy makers in the area of transport. Most companies today are challenged by change. They strive to react with quick solutions, while at the same time design new opportunities for the future. But inevitably, they get disappointing results. Why? In *Future Value Generation*, Daniel Egger offers a compelling and provocative answer: Innovation merely attempts to solve past problems, Strategy locks in a static worldview, and foresight too often explores what is possible, but not practical. The missing integration of the three processes leads to a prioritization of the present, and an intensifying urgency to prepare for the future. As the quantity and complexity of change will only increase, the pressure for executives to react to it and proactively shape their future grows. To create new value, companies need integration. The logic presented in this book explores the synergies

and benefits of connecting innovation, foresight and strategy. It presents a framework that increases the agility of strategic implementation, establishes a continuous and aligned innovation process, and explains how to generate value for the future. Filled with deep practical insights and fresh perspectives, *Future Value Generation* is a "how-to" for successful and profitable future organizations."

Negotiating Change

The Stationery Office Originally published in 1972, *Should Trees Have Standing?* was a rallying point for the then burgeoning environmental movement, launching a worldwide debate on the basic nature of legal rights that reached the U.S. Supreme Court. Now, in the 35th anniversary edition of this remarkably influential book, Christopher D. Stone updates his original thesis and explores the impact his ideas have had on the courts, the academy, and society as a whole. At the heart of the book is an eminently sensible, legally sound, and compelling argument that the environment should be granted legal rights. For the new edition, Stone explores a variety of

recent cases and current events--and related topics such as climate change and protecting the oceans--providing a thoughtful survey of the past and an insightful glimpse at the future of the environmental movement. This enduring work continues to serve as the definitive statement as to why trees, oceans, animals, and the environment as a whole should be bestowed with legal rights, so that the voiceless elements in nature are protected for future generations.

Fundamental changes have occurred in all aspects of forestry over the last 50 years, including the underlying science, societal expectations of forests and their management, and the evolution of a globalized economy. This textbook is an effort to comprehensively integrate this new knowledge of forest ecosystems and human concerns and needs into a management philosophy that is applicable to the vast majority of global forest lands. Ecological forest management (EFM) is focused on policies and practices that maintain the integrity of forest

ecosystems while achieving environmental, economic, and cultural goals of human societies. EFM uses natural ecological models as its basis contrasting it with modern production forestry, which is based on agronomic models and constrained by required return-on-investment.

Sections of the book consider: 1) Basic concepts related to forest ecosystems and silviculture based on natural models; 2) Social and political foundations of forestry, including law, economics, and social acceptability; 3)

Important current topics including wildfire, biological diversity, and climate change; and 4) Forest planning in an uncertain world from small privately-owned lands to large public ownerships. The book concludes with an overview of how EFM can contribute to resolving major 21st century issues in forestry, including sustaining forest dependent societies.

Should Trees Have Standing? Edward Elgar Publishing

Presents evidence that is taken before Sub-committee B (Internal Market).

The Stationery Office Sustainable Development in Hong Kong provides a unique and pioneering examination of what the application of the ideas of sustainable development implies for Hong Kong with all its exceptional characteristics, political, social, ecological, and especially its very high urban density. The book brings together, for the first time, a broad cross-section of 21 public and private sector specialists in the many and varied aspects of sustainable development. In so doing, it demonstrates the breadth and depth of local knowledge and expertise in the subject, as well as the wide range of concepts and issues that will have to be considered and interests reconciled, for the concept to be fully implemented in Hong Kong. Sustainable development has been defined as: "development that meets the needs of

today whilst not affecting the ability of future generations to meet their own needs."

Implementing this concept requires that decision-makers from all stakeholder groups (government, business and the public) not only commit to sustainable development, but also incorporate it at every level of decision-making regardless of the political, economic, social, technological, cultural and legal frameworks within which their decisions are made. It also requires that, before doing so, they hear, respect and utilize the input from each other in these decisions.

Sustainable development was placed squarely on the political agenda in Hong Kong through the Chief Executive's commitment to it in his Policy Address in 1999. This was followed by the adoption of it as an overriding objective in Hong Kong 2030: Planning Vision and Strategy (2001) and the establishment of the Sustainable Development Unit (2001) and the Council for Sustainable Development (2003). This is a book for all who are concerned about Hong Kong's environment and about its future

development. The exceptional nature of Hong Kong means that this book also provides a valuable extreme case study for all who work in the sustainable development field.

Univ of California Press In *Instilling Values in Transcending Generations*, Tieman Dippel creates a new paradigm in his focus on the power of a culture of morality and individual responsibility to impact the more competitive powers of economics and partisan politics. Rather than a book on morality, it is a book on the power of morality and how to shape society. It teaches readers to value individual responsibility and character rather than adopt a concept of victimization. In doing so it explains the necessity of changing the current drift that American culture has taken toward materialistic relativism. It is a book about the power of morality and the necessity of having a common core of ideas. It is focused on teaching readers how to more effectively fight in a world dominated by the powers of convenience, corruption, and terrorism.
