Reinforced Masonry Design Royal
Society of Chemistry

This volume provides an in-depth, state-of-the-art exploration of the entire gamut of modern masonry construction - - properties and performance of masonry materials, design criteria and methods in reinforced masonry, complete design applications for both low and high-rise masonry, and environmental features. This new edition reflects the landmark changes in the philosophy in the 1992 Uniform Building Code (e.g., introduction of Strength Design concepts of bearing and shear wall analysis; changes in lateral force levels; revision of the Base Shear Formula). Integrates design principles with the governing Uniform Building Code throughout; demonstrates the symbiotic relationships that exist among the various structural components (e.g. beams, columns, lateral force resisting systems); presents complete designs for reinforced concrete and structural steel; contains problem examples demonstrating how to design various structural components, and features four case studies (numerical examples) showing how to integrate the various structural components into a complete system. For structural designers, draftsman, and engineers.

Report Bloomsbury Publishing USA

Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 80 years the Royal Society of Chemistry and its predecessor, the Chemical Society, have been publishing reports charting developments in chemistry, which originally took the form of Annual Reports. However, by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two, and subsequently three, volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a 'must'. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged, while others have altered their emphasis along with their titles; some have been combined under a new name whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.

Resources in Vocational Education
Geological Society of America

For every woman still bumping the glass ceiling and every man who cares, these volumes recount challenges female leaders face—and strategies that will smooth the path to managerial positions in corporate America and worldwide.

Expert contributors offer a global perspective on issues women leaders and managers must confront every day, from sex discrimination, sexual harassment, and gender mainstreaming to pay inequity and male perceptions of women leaders. Volume 1, *Degrees of Challenge*, addresses both overt and subtle biases women encounter in trying to meet their career aspirations. Volume 2, *Signs of Solutions*, offers concrete, empowering strategies for organizational change intended to eliminate discriminatory treatment of women in the workplace. The 30 research-based studies here are drawn from nations as disparate as the United States, Turkey, Puerto Rico, Australia, Japan, Great Britain, Israel, the Czech Republic, the Dominican Republic, India, Nepal, Korea, Sri Lanka, and Indonesia to showcase new and emerging solutions worldwide. Accounts from woman managers are also included to provide the reader with real-life examples of how women deal with organizations that welcome them—and those that hinder their performance.
