Finalist for a 2021 High Plains Book Award for Poetry Bertrand Bickersteth's debut poetry collection explores what it means to be black and Albertan through a variety of prisms: historical, biographical, and essentially, geographical. The Response of Weeds offers a much-needed window on often overlooked contributions to the province's character and provides personal perspectives on the question of black identity on the prairies. Through these rousing and evocative poems, Bickersteth uses language to call up the contours of the land itself, land that is at once mesmerizing as it is

dismissively effacing. Such is black identity here on this paradoxical land, too.

Nominated for the 2022 BookTube Prize in Nonfiction Anthony Bourdain's long time director and producer takes readers behind the scenes to reveal the insanity of filming television in some of the most volatile places in the world and what it was like to work with a legend. In the nearly two years since Anthony Bourdain's death, no one else has come close to filling the void he left. His passion for and genuine curiosity about the people and cultures he visited made the world feel smaller and more connected. Despite his affable, confident, and trademark snarky TV persona, the real Tony was intensely private, deeply conflicted about his fame, and an enigma even to those close to him. Tony's devoted crew knew him best, and no one else had a front-row seat for as long as his director and producer, Tom Vitale. Over the course of more than a decade traveling together, Tony became a boss, a friend, a hero and, sometimes, a tormentor. In the Weeds takes readers behind the scenes to reveal not just the insanity that went into filming in some of the most far-flung and volatile parts of the world, but what Tony was like unedited and off-camera. From the outside, the job looked like an all-expenses-paid adventure to places like Borneo, Vietnam, Iran,

the Democratic Republic of Congo, and Libya. What happened off-camera was far more interesting than what made it to air. The more things went wrong, the better it was for the show. Fortunately, everything fell apart constantly.

Weeds and What They Tell Us Chronicle Books

The Wild Wisdom of Weeds is the only book on foraging and edible weeds to focus on the thirteen weeds found all over the world, each of which represents a complete food source and extensive medical pharmacy and first-aid kit. More than just a field guide to wild edibles, it is a global plan for human survival. When Katrina Blair was eleven she had a life-changing experience where wild plants spoke to her, beckoning her to become a champion of their cause. Since then she has spent months on end taking walkabouts in the wild, eating nothing but what she forages, and has become a wild-foods advocate, community activist, gardener, and chef, teaching and presenting internationally about foraging and the healthful lifestyle it promotes. Katrina Blair's philosophy in *The Wild Wisdom of Weeds* is sobering, realistic, and ultimately optimistic. If we can open our eyes to see the wisdom found in these weeds right under our noses, instead of trying to eradicate an "invasive," we will achieve true food security. *The Wild Wisdom of Weeds* is about healing ourselves both in body and in spirit, in an age where technology, commodity agriculture, and processed foods dictate the terms of our intelligence. But if we can become familiar with these thirteen edible survival weeds found all over the world, we will never go hungry, and we will become closer to our own wild human instincts—all the while enjoying the freshest, wildest, and most nutritious food there is. For free! The thirteen plants found growing in every region across the world are: dandelion, mallow, purslane, plantain, thistle, amaranth, dock, mustard, grass, chickweed, clover, lambsquarter, and knotweed. These special plants contribute to the regeneration of the earth while supporting the survival of our human species; they grow everywhere where human civilization exists, from the hottest deserts to the Arctic Circle, following the path of human disturbance. Indeed, the more humans disturb the earth and put our food supply at risk, the more these thirteen plants proliferate. It's a survival plan for the ages. Including over one hundred unique recipes, Katrina Blair's book teaches us how to prepare these wild plants from root to seed in soups, salads, slaws, crackers, pestos, seed breads, and seed butters; cereals, green powders, sauerkrauts, smoothies, and milks; first-aid concoctions such as tinctures, teas, salves, and soothers; self-care/beauty products including shampoo, mouthwash, toothpaste (and brush), face masks; and a lot more. Whether readers are based at home or traveling, this book aims to empower individuals to maintain a state of optimal health with minimal cost and effort.

The Response of Weeds Reed New Holland

In Thomas Jefferson's day, 90 percent of the population worked on family farms. Today, in a world dominated by agribusiness, less than 1 percent of Americans claim farm-related occupations. What

was lost along the way is something that Evelyn I. Funda experienced firsthand when, in 2001, her parents sold the last parcel of the farm they had worked since they married in 1957. Against that landscape of loss, Funda explores her family's three-generation farming experience in southern Idaho, where her Czech immigrant family spent their lives turning a patch of sagebrush into crop land. The story of Funda's family unfolds within the larger context of our country's rich immigrant history, western culture, and farming as a science and an art. Situated at the crossroads of American farming, *Weeds: A Farm Daughter's Lament* offers a clear view of the nature, the cost, and the transformation of the American West. Part cultural history, part memoir, and part elegy, the book reminds us that in losing our attachment to the land we also lose some of our humanity and something at the very heart of our identity as a nation.

If there's one lesson every homeowner must learn, it's this: The traditional lawn is a huge, time-consuming, synthetic-chemical sucking mistake. The time has come to look for new ways to create friendly, livable spaces around our homes. In *The American Meadow Garden*, ornamental grass expert John Greenlee creates a new model for homeowners and gardeners. For Greenlee, a meadow isn't a random assortment of messy, anonymous grasses. Rather, it is a shimmering mini-ecosystem, in which regionally appropriate grasses combine with colorful perennials to form a rich tapestry that is friendly to all life — with minimal input of water, time, and other scarce resources. Kids and pets can play in complete safety, and birds and butterflies flock there. A prairie style planting is a place you want to be. With decades of experience as a nurseryman and designer, John Greenlee is the perfect guide. He details all the practicalities of site preparation, plant selection, and maintenance; particularly valuable are his explanations of how ornamental grasses perform in different climates and areas. Gorgeous photography by Saxon Holt visually illustrates the message with stunning examples of meadow gardens from across the country. We've reached a stage where we can no longer follow past practices unthinkingly, particularly when those practices are wasteful and harmful to the environment. It's time to get rid of the old-fashioned lawn and embrace a sane and healthy future: the American meadow garden.

As long as humans have existed, they've worked and competed with plants to shape their surroundings. As cities developed and expanded, their diverse spaces were covered with and colored by weeds. In *Weeds*, Zachary J. S. Falck presents a comprehensive history of "happenstance plants" in American urban environments. Beginning in the late nineteenth century and continuing to the present, he examines the proliferation, perception, and treatment of weeds in metropolitan centers from Boston to Los Angeles. In dynamic city ecosystems, population movements and economic cycles establish and transform habitats where vegetation continuously changes. Americans came to associate weeds with infectious diseases and allergies, illegal dumping, vagrants, drug dealers, and decreased property values. Local governments and citizens' groups attempted to eliminate unwanted plants to better their urban environments and improve the health and safety of inhabitants. Over time, a growing understanding of the natural environment made "happenstance plants" more tolerable and even desirable. In the twenty-first century, scientists have warned that the effects of global warming and the heat-trapping properties of cities are producing more robust strains of weeds. Falck shows that nature continues to flourish where humans have struggled: in the aftermath of Hurricane Katrina, in the abandoned homes of the California housing bust, and alongside crumbling infrastructure. Weeds are here to stay.

WHAT DO WE KNOW ABOUT MARIJUANA AND HOW DO WE KNOW IT? Marijuana is the most frequently consumed illicit drug worldwide, with over 158.8 million users, according to the UN. Weed Science Storey Publishing, LLC

In "a brilliant antidote to all the...false narratives about pot" (American Thinker), an award-winning author and former New York Times reporter reveals the link between teenage marijuana use and mental illness, and a hidden epidemic of violence caused by the drug—facts the media have

ignored as the United States rushes to legalize cannabis. Recreational marijuana is now legal in nine states. Advocates argue cannabis can help everyone from veterans to cancer sufferers. But legalization has been built on myths—that marijuana arrests fill prisons; that most doctors want to use cannabis as medicine; that it can somehow stem the opiate epidemic; that it is beneficial for mental health. In this meticulously reported book, Alex Berenson, a former New York Times reporter, explodes those myths, explaining that almost no one is in prison for marijuana; a tiny fraction of doctors write most authorizations for medical marijuana, mostly for people who have already used; and marijuana use is linked to opiate and cocaine use. Most of all, THC—the chemical in marijuana responsible for the drug's high—can cause psychotic episodes. "Alex

Berenson has a reporter's tenacity, a novelist's imagination, and an outsider's knack for asking intemperate questions" (Malcolm Gladwell, The New Yorker), as he ranges from the London institute that is home to the scientists who helped prove the cannabis-psychosis link to the Colorado prison where a man now serves a thirty-year sentence after eating a THC-laced candy bar and killing his wife. He sticks to the facts, and they are devastating. With the US already gripped by one drug epidemic, Tell Your Children is a "well-written treatise" (Publishers Weekly) that "takes a sledgehammer to the promised benefits of marijuana legalization, and cannabis enthusiasts are not going to like it one bit" (Mother Jones).
