This book provides a detailed overview of the current understanding of the metabolic system of starch biosynthesis and degradation in plants. The focus is on new topics regarding the functional interaction between multiple enzymes and the initiation process of starch biosynthesis, which are essential for further understanding of related metabolic features. The book also explains and discusses the distinct structures of amylopectin and amylose and the crystalline structure of starch granules. At the same time, readers will be made aware of areas where further research remains to be done, such as the regulation of starch metabolism, the fine structure of starch molecules, and the manipulation of the structure and functional properties of starch by genetic and molecular technology. Also described are aspects of the biosynthetic machinery of starch, the structure and metabolism of which have developed and been refined during the process of plant evolution. In addition, recent approaches to producing novel starches with distinct physicochemical and functional properties in gene-modified mutants and transgenic plants for industrial applications are introduced. Finally, the book elaborates on the unresolved topics, necessary approaches and future prospects to achieve a complete understanding of the regulation of starch metabolism. This volume is of great value for general scientists, students and anyone wishing to understand the specific and complicated events of starch metabolism and biotechnology. It will be especially useful for food scientists and engineers in academia and industry.

This book explores the significant body of architectural photographs produced in Czechoslovakia in the period of the 1920s and 1930s. In these important years, both architects and photographers saw themselves as participants in the creation of a new world, pursuing beliefs in social and technological utopias. Practitioners in the two fields shared and stimulated each other's vision, fostering interplay that consisted of mutual influences, parallels, and affinities. The process of modernization as well as the creation of nation states and the rise of the middle class started later in Central Europe than in Western Europe. With its young middle class, Czechoslovak state eagerly embraced modern ideas and recognized in architecture a powerful tool for expressing its goals and ideals. For this reason, Czechoslovakia became one of the centers of the modern movement in architecture in the 1920s and 1930s. -- From publisher's description.
