[www.gurcharanamacademy.in](http://www.gurcharanamacademy.in) CONTACTS: 8905805741 *Quadrilaterals* Henri Picciotto The authors present twenty icons of mathematics, that is, geometrical shapes such as the right

triangle, the Venn diagram, and the yang and yin symbol and explore mathematical results associated with them. As with their previous books (*Charming Proofs, When Less is More, Math Made Visual*) proofs are visual whenever possible. The results require no more than high-school mathematics to appreciate and many of them will be new even to experienced readers. Besides

theorems and proofs, the book contains many illustrations and it gives connections of the icons to the world outside of mathematics. There are also problems at the end of each chapter, with solutions provided in an appendix. The book could be used by students in courses in problem solving, mathematical reasoning, or mathematics for the liberal arts. It could also be read with pleasure by

professional mathematicians, as it was by the members of the Dolciani editorial board, who unanimously recommend its publication. *NSW Targeting Maths* Simon and Schuster Math in a Minute for grade 4 includes essential math skills such as finding factors and multiples, analyzing patterns and relationships, and understanding the place value system. This 96-page workbook also

includes adding, subtracting, multiplying, and dividing multi-digit whole numbers, drawing and identifying geometric lines and angles and measuring angles and more. Math in a Minute has fun math activities with pages separated by skill, theme, and completion time. Activities range in complexity from 1 minute to 10 minutes depending on the grade

level. This allows children to gradually build their way up to more and more intense work. The repetition gives children an opportunity to reinforce basic skills and concepts.  Oswaal Books and Learning Private Limited Learn and practice essential geometry skills. The answer to every problem, along with helpful notes, can be found

at the back of the book. This volume focuses on fundamental concepts relating to triangles, and also covers quadrilaterals and other polygons. Topics include: lines, angles, and transversals; angles of a triangle; congruent triangles; similar triangles and ratios; right triangles, including the Pythagorean theorem and special triangles; perimeter and area of a triangle,

including Heron's formula; thorough coverage of bisectors, medians, and altitudes, including the incenter, circumcenter, centroid, and orthocenter (though the concepts of inscribed or circumscribed circles are reserved for Volume 2); the triangle inequality; quadrilaterals; and polygons. The author, Chris McMullen, Ph.D., has over twenty years of experience teaching math

skills to physics students. He prepared this workbook of the Improve Your Math Fluency series to share his strategies for solving geometry problems and formulating proofs. *Interactive Notebooks Seasonal, Grade 3* Carson-Dellosa Publishing Geometry Labs is a book of hands-on activities that use manipulatives to teach important ideas in geometry.
