 Figure 1: A discrete time control input with zero order hold applied to a continuous time system. $G_k(j)$: (11) For stability, the eigenvalues of G_{must} have magnitude < 1 . So if the continuous time plant is stable ($\text{eig}(A) < 0$) the discrete time plant will have eigenvalues with magnitude less than 1. Discrete-Time Control Systems 1995. Discrete time control systems. The

standard number system used for processing digital signals is the binary number system. In this system the code group consists of n pulses each indicating either "on" (1) or "off" (0). In the case of quantizing, n "on-off" pulses can represent 2^n amplitude levels or output states. Discrete time control systems - SlideShare
