Sensors are everywhere. Small, flexible, economical, and computationally powerful, they operate ubiquitously in environments. They compile massive amounts of data, including information about air, water, and climate. Never before has such a volume of environmental data been so broadly collected or so widely available. Grappling with the consequences of wiring our world, Program Earth examines how sensor technologies are programming our environments. As Jennifer Gabrys points out,

sensors do not merely record information about an environment. Rather, they generate new environments and environmental relations. At the same time, they give a voice to the entities they monitor: to animals, plants, people, and inanimate objects. This book looks at the ways in which sensors converge with environments to map ecological processes, to track the migration of animals, to check pollutants, to facilitate citizen participation, and to program infrastructure. Through discussing particular instances where sensors are deployed for environmental study and citizen engagement across three areas of environmental sensing, from wild sensing to pollution sensing and urban sensing, Program Earth asks how sensor technologies specifically contribute to new environmental conditions. What are the

implications for wiring up environments? How do sensor applications not only program environments, but also program the sorts of citizens and collectives we might become? Program Earth suggests that the sensor-based monitoring of Earth offers the prospect of making new environments not simply as an extension of the human but rather as new “technogeographies” that connect technology, nature, and people.

The Technopolitics of Cold War Routledge

Moment Maker UCL Press

Beyond Innovation counter weighs the present innovation monomania by broadening our thinking about technological and institutional change. It is done by a multidisciplinary review of the most common ideas about the dynamics between technology and institutions.

Cartography in France, 1660-1848 Routledge

Environmental History as a distinct discipline is now over a generation old, with a large and diverse group of practitioners around the globe. This book provides a reflection on the achievements, diversity, and direction of environmental history in its varied national, international and continental contexts.

How Knowledge Moves Springer

Of Limits and Growth offers new perspectives on environmentalism, post-1945 international history, and the origins of sustainability.

[NASA in the World](#) Palgrave Macmillan

Denne boken behandler norske romaktiviteter fra pionertiden med nordlys- forskning til deltakelse i internasjonale moderne

romprogram. Norge har all-tid inntatt en aktiv rolle både i forskning og utvikling av teknologi. Redaksjonskomiteen består av historikere og naturvitenskapsmenn som har sam-let bidrag om den norske innsatsen fra pionerer som bl.a. Kristian Birkeland og gjennom perioder med den kalde krigen frem til europeisk og internasjonalt samarbeid. Bakerst i boken finnes forskjellige registre og notehensvisninger.

The Development Century University of Illinois Press

"Fans of Sarah Dunn, Elisabeth Egan, and Isabel Gillies will relate to the multifaceted lives of Krien's characters, brilliantly rendered in her vivid voice." -- Booklist Writing with the wry realism of Sally Rooney, one of Germany's most promising literary talents demonstrates her incisive understanding of the complexities of relationships and the depths of the human heart in this witty and compulsively readable novel about five very different women whose lives intersect. What happens when women fulfill their roles as wives, mothers, friends, lovers, sisters, and daughters? What comes next? Award-winning author Daniela Krien explores these questions in this powerful novel of friendship, love, loss, and everything in between. Krien explores the hopes, ambitions, challenges, and disappointments that shape modern women's lives, offering intimate insights on motherhood and childlessness, bereavement, infidelity, and divorce. At the heart of the novel are five very different women who find themselves hurtling towards a new way of living without knowing quite how they got there. A fresh take on women's lives, Love in Case of Emergency is a punchy yet sensitive novel that takes the notion of aspiring to find happiness and connection to new and exhilarating heights. Translated from the German by Jamie Bulloch

New Natures Transit Publishing

Using Lady Morgan's *The Wild Irish Girl* as his point of departure, Thomas J. Tracy argues that nineteenth-century debates over what constitutes British national identity often revolved around representations of Irishness, especially Irish womanhood. He maps the genealogy of this development in fiction, political discourse, and the popular press, from Edgeworth's *Castle Rackrent* through Trollope's Irish novels, focusing on the pivotal period from 1806 through the 1870s.

Feminism and Social Change American Library Association
French scientists, engineers, and public officials were responsible for the most important and distinctive innovations in cartography in eighteenth-century Europe. By expanding the analytical uses of maps, by establishing unprecedented standards of accuracy, and by nurturing institutional frameworks to sustain mapping projects over many years, the French contributed to one of the central concepts of modern times: that man, through direct observation and accumulated information can better understand and manage his affairs. Concentrating on how and why new concepts and techniques of making and using maps were introduced, Josef Konvitz skillfully traces the modernization of cartography during the French Enlightenment. The story he unfolds is not merely a narrative of who did what, but an analysis of how the map itself influenced attitudes toward the land and the consequent effects on planning and the development of resources. Throughout, Konvitz demonstrates the significant relationship between cartography and political, economic, and military life. He emphasizes efforts to enlarge the practical applications of maps in government and the impact of government policy on the

evolution of cartography.

Love in Case of Emergency Taylor & Francis

"The connection between geography and progress is fundamental," writes Robert Sack in the introduction to the present volume. Touching on both moral and material progress, six of the world's leading geographers and environmental historians explore differing aspects of this connection. Thomas Vale discusses whether progress is discernible in the natural realm; Kenneth Olwig examines fundamental changes that occurred to the notion of progress with the rise of modernity, while David Lowenthal and Yi-Fu Tuan discuss recent geographical changes that have resulted in an increasing societal disenchantment and anxiety. Nicholas Entrikin looks at progress as "moral perfectibility, and its connection to democratic places," a theme which Robert Sack further explores by prescribing ways in which geographers and citizens can evaluate and create places that increase our awareness of reality in its variety and complexity. Contributors: J. Nicholas Entrikin, University of California-Los Angeles; David Lowenthal, University College, London; Kenneth Olwig, University in Trondheim, Norway; Robert David Sack, University of Wisconsin-Madison; Yi-Fu Tuan, University of Wisconsin-Madison; Thomas R. Vale, University of Wisconsin-Madison.

World War II Heroes Cambridge University Press

Life is made of moments. What are you doing to make the most of them? In *Moment Maker*, Carlos Whittaker shows you how to make each moment count, so those moments add up to a life rich with meaning, deeply satisfying, and full of purpose. Every day we have an opportunity to make our lives meaningful, to make

them matter. Yet, for so many of us, we let too much of life happen without taking notice. For author, speaker, and podcaster Carlos Whittaker, living deliberately has become a way of life. Making moments that are significant, memorable, or impactful are a part of how he navigates each day, and it has forever changed the landscape of his story. In *Moment Maker*, Carlos shares powerful stories and examples from ordinary life, as well as insights from Scripture, that have formed his practical and meaningful game plan for living on purpose and with purpose. In these pages, he will guide you to: Increase awareness of your surroundings, the people you encounter, and the needs of others Recognize opportunities that present themselves and be encouraged to seize them Discover how to create, receive, and rescue key moments in everyday life Unlock the satisfaction of living to the full depth of your life's potential The beauty of having a moment-making life is that it does not require a big investment of time, energy, or money. It simply requires a commitment to pay attention. All around you there are opportunities to meet a need, shift your focus, and begin healing. It is time to become a Moment Maker.

Pain Psychology for Clinicians Routledge

In this book, the author traces the origins of the domestic Swedish guided missile development effort, and shows how an effective Swedish air defense presupposed the consent to American hegemony. The cooperation was established through a series of crucial decisions made by the Swedish government to tacitly give its consent to American hegemony in European and world affairs. This process started in 1948 with the Swedish participation in the Marshall Plan and can be considered to have been finalized in 1952 when President Truman made Sweden eligible for reimbursable armaments deliveries from the United States. In 1959 Sweden purchased the Sidewinder Guided Missile from the United States. This confirmed that Sweden had become a trusted and close ally of the U.S. in the Cold War in Europe. The focus of the study is the effort to develop Swedish-made guided missiles for the Swedish Army and Air Force 1945;1962. These efforts were stymied by the lack of funding and know-how, and therefore the author concludes that Swedish cooperation with the United States during the Cold War cannot be viewed as a series of exceptions to the policy of neutrality, but that hegemonic theory permits the display of sovereignty that Sweden's policy gave expression to. The Swedish consent to American hegemony was constant throughout the period studied, just as the American acceptance of Swedish foreign policy behavior and its recognition of Sweden as an ally in the Cold War. The reason for denying Sweden access to guided missiles had nothing to do with

American apprehensions regarding the policy of neutrality, but with the U.S. government's lack of trust in its allies overall--including the NATO countries. Likewise, the decision to finally release these missiles to Sweden had to do with American concerns for the credibility of its leadership in the eyes of its European allies.

Dark Run Santerus Academic Press

Affective Health and Masculinities in South Africa explores how different masculinities modulate substance use, interpersonal violence, suicidality, and AIDS as well as recovery cross-culturally. With a focus on three male protagonists living in very distinct urban areas of Cape Town, this comparative ethnography shows that men's struggles to become invulnerable increase vulnerability. Through an analysis of masculinities as social assemblages, the study shows how affective health problems are tied to modern individualism rather than African 'tradition' that has become a cliché in Eurocentric gender studies. Affective health is conceptualized as a balancing act between autonomy and connectivity that after colonialism and apartheid has become compromised through the imperative of self-reliance. This book provides a rare perspective on young men's vulnerability in everyday life that may affect the reader and spark discussion about how masculinities in relationships shape physical and psychological health. Moreover, it shows how men change in the face of distress in ways that may look different than global health and gender-transformative approaches envision. Thick descriptions of actual events over the life course make the study accessible to both graduate and undergraduate students in the social sciences. Contributing to current debates on mental health

and masculinity, this volume will be of interest to scholars from various disciplines including anthropology, gender studies, African studies, psychology, and global health.

The Engagement of Professional Services MIT Press

This book reconsiders the power of the idea of the future.

Bringing together perspectives from cultural history, environmental history, political history and the history of science, it investigates how the future became a specific field of action in liberal democratic, state socialist and post-colonial regimes after the Second World War. It highlights the emergence of new forms of predictive scientific expertise in this period, and shows how such forms of expertise interacted with political systems of the Cold War world order, as the future became the prism for dealing with post-industrialisation, technoscientific progress, changing social values, Cold War tensions and an emerging Third World. A forgotten problem of cultural history, the future re-emerges in this volume as a fundamentally contested field in which forms of control and central forms of resistance met, as different actors set out to colonise and control and others to liberate. The individual studies of this book show how the West European, African, Romanian and Czechoslovak "long term" was constructed through forms of expertise, computer simulations and models, and they reveal how such constructions both opened up new realities but also imposed limits on possible futures.

Program Earth Cambridge University Press

Histories of Technology, the Environment and Modern Britain brings together historians with a wide range of interests to take a uniquely wide-lens view of how technology and the environment have been intimately and irreversibly entangled in Britain over

the last 300 years. It combines, for the first time, two perspectives with much to say about Britain since the industrial revolution: the history of technology and environmental history. Technologies are modified environments, just as nature is to varying extents engineered. Furthermore, technologies and our living and non-living environment are both predominant material forms of organisation – and self-organisation – that surround and make us. Both have changed over time, in intersecting ways. Technologies discussed in the collection include bulldozers, submarine cables, automobiles, flood barriers, medical devices, museum displays and biotechnologies. Environments investigated include bogs, cities, farms, places of natural beauty and pollution, land and sea. The book explores this diversity but also offers an integrated framework for understanding these intersections.

Irishness and Womanhood in Nineteenth-century British Writing University of Chicago Press

This book sheds new light on the foreign policies, roles, and positions of neutral states and the Non-Aligned Movement (NAM) in the global Cold War. The volume places the neutral states and the NAM in the context of the Cold War and demonstrates the links between the East, the West, and the so-called Third World. In doing so, this collection provides readers an alternative way of exploring the evolution and impact of the Cold War on North-South connections that challenges traditional notions of the post-1945 history of international relations. The various contributions are framed against the backdrop of the evolution of the Cold War international system and the decolonization process in the Southern hemisphere. By juxtaposing the policies of

European neutrals and countries of the NAM, this book offers new perspectives on the evolution of the Cold War. With the links between these two groups of countries receiving very little attention in Cold War scholarship, the volume thus offers a window into a hitherto neglected perspective on the Cold War. Via a series of case studies, the chapters here present new viewpoints on the evolution of the global Cold War through the exploration of the ensuing internal and (mainly) external policy choices of these nations. This book will be of much interest to students of Cold War Studies, international history, foreign policy, security studies and IR in general.

Sweden in space is an account of the early years of Swedish space research, up until the formation of the present national space organisation. It is a story of scientific successes, optimism and pioneer spirit, but also of the resistance that was encountered by a new and expensive activity as it sought to find a place in the established research and technical community.
