It contains a unique blend of text, colour photographs, imaging and diagrams describing the gross systematic and topographical anatomy of domestic mammals. Throughout the book the authors focus on anatomical relationships

to clinical conditions and where appropriate, to microscopic anatomy, histology, embryology and physiology. Greatest emphasis is given to dog and cat and horse, with relevant information on ox/cow, pig, sheep, goat and rabbit. nonhuman bones is often very striking, it can also be quite subtle. Fragmentation only compounds the problem. The ability to differentiate between human and nonhuman bones is dependent on the training of the analyst and the available reference and/or comparative material. Comparative Osteology is a photographic atlas of common North American animal bones

designed for use as a laboratory and field guide by the forensic scientist or archaeologist. The intent of the guide is not to be inclusive of all animals, but rather to present some of the most common species which also have the highest likelihood of being potentially confused with human remains. An affordably priced, compact laboratory/field manual, comparing human and

nonhuman bones Contains almost 600 high-quality black and white images and diagrams, including inch and centimeter scales with each photograph Written by the foremost forensic scientists with decades of experience in the laboratory and as expert witnesses An additional Companion Web site hosts images from the volume the reader can magnify and zoom into to see specific

Extraordinary accuracy and beautiful original artwork are just two features readers will find in this new resource, providing a basic foundation in domestic large animal anatomy. Its unique organization includes the anatomy of all organ systems in the various species, described in a consistent manner. The book presents relevant anatomy of the following

species: *
Horse (with contributors by Dr. Gayle Trotter) * Ox (with contributions by Dr. Fran Garry) *
Sheep and goat (with contributions by Dr. Joan Bowen) *
Llama and alpaca (with contributions by Dr. LaRue Johnson) *
Swine (with contributions by Dr. LaRue Johnson) * and chicken (with contributions by Dr. John Avens).
Features that enhance understanding : * Carefully selected

labeling helps students learn and remember structures and relationships. * Male and female of a given species are depicted on facing pages so that topographic anatomy is easy to compare. * Structures common to various animals are labeled several times, whereas unique structures are labeled only on one or two species so students can make rapid distinctions of the structures

peculiar to certain animals. * An introduction provides readers with a background in nomenclature and anatomic orientation so they can benefit from the atlas even if they lack training in anatomy. The Atlas depicts topographic relationships of major organs in a simple, yet technically accurate presentation that's free of extraneous detail so that those using the atlas can concentrate on the

essential aspects of anatomy. *Spurgeon's Color Atlas of Large Animal Anatomy* Saunders Put yourself in the box seat at exam time ... The days of cramming dry anatomical facts are over. It's time to look at anatomy as an opportunity to appreciate a fascinating world of relationships and interconnections. Featuring: The complete spectrum of systematic and topographic anatomy:

clearly structured and vividly presented, featuring superb high-quality images. A combined text and atlas takes into account a variety of species, an ideal resource for developing a comprehensive understanding of anatomical structures and relationships. Integrated sectional anatomy and contemporary diagnostic imaging: a window into the application of anatomy in

diagnostics. Highlights you won't want to miss: A new chapter on avian anatomy: the fundamental structural features of birds, at a glance. Over 1100 exceptional images: anatomical specimens and histological images, thin slice plastinations, colour schematics, diagnostic imaging, sectional anatomy. Numerous references to clinical and applied

anatomy: including equine endoscopy, arthrocentesis, examination of the udder, rectal examination and laparotomy. A unique bonus: CT, MRI and ultrasonographic images. Bringing anatomy to life!
