It is published daily when Congress is in session. The Congressional Record began publication in 1873. Debates for sessions prior to 1873 are recorded in The Debates and Proceedings in the Congress of the United States (1789-1824), the Register of Debates in Congress (1824-1837), and the Congressional Globe (1833-1873) <i>The Foundry Trade Journal</i> Springer All of us, as</p>	<p>Canadians, are touched throughout our lives by some aspect of social welfare, either as recipients, donors, or taxpayers. But despite the importance of the social network in our country, there has been no single source of information about this critical component of our society. Even professionals in the field of social work or social services have not had a comprehensive volume addressing</p>

the myriad features of this critical societal structure. The Encyclopedia of Canadian Social Work fills this need. Over five hundred topics important to Canadian social work are covered, written by a highly diverse group of social workers covering all aspects of the field and all areas of the country. Practitioners, policy makers, academics, social advocates, researchers, students, and

administrators present a rich overview of the complexity and diversity of social work and social welfare as it exists in Canada. The principal finding from this project underscores the long-held perception that there is a Canadian model of social work that is unique and stands as a useful model to other countries. The Encyclopedia of Canadian Social Work will be an important source of

information, both to Canadians and to interested groups around the world. The Encyclopedia of Canadian Social Work is available in e-book version by subscription or from university and college libraries through the following vendors: Canadian Electronic Library, Ebrary, MyiLibrary, and Netlibrary. <p>as a method of discovery. The researchers' values and politics colour their work and so do their choices of scientific method. This book is about both - the technical effects of values and the political effects of technique. The author reports what social scientists and historians actually do. He sorts out the scientific from the political content in a wide range of old and new</p>	<p>work in history, sociology, political science and economics. The overall work is a detailed political and technical criticism of the 'scientistic' programme which would have researchers select for such qualities as objectivity, uniformity, and generality, cumulation and professional unanimity. <u>The South Western Reporter</u> Springer</p>	<p>Science &amp; Business Media Featuring updates and revisions to reflect rapid changes in an increasingly globalized world, Readings in Planning Theory remains the definitive resource for the latest theoretical and practical debates within the field of planning theory. In response to the 2008 financial crisis

and drawing on his experience trading derivatives, LiPuma outlines how they function as complex devices that organize speculative capital as well as the ways derivative-driven capitalism not only produces the conditions for its own existence, but also penetrates the fabric of everyday life. Framing finance as a form of social life and highlighting the intrinsically

social character of financial derivatives, LiPuma deepens our understanding of derivatives so that we may someday use them to serve the public well-being.

Taking Aim at The Arms Trade: NGOs, Global Civil Society and the World  
Military Order takes a critical look at the ways in which NGOs portray the arms trade as a problem of international

politics and the strategies they use to effect change. NGOs have been pivotal in bringing the suffering caused by the arms trade to public attention, documenting its negative impact on human rights, conflict, security and development around the world, and pushing for measures to control or eradicate the trade. Overall, however, their activity has helped sideline debate on Northern

military predominance while facilitating intervention in the South based on liberal understanding s of the arms trade, conflict, development and human rights. They thus contribute to the perpetuation of a hierarchical world military order and the construction of the South as a site of Northern benevolence and intervention. Stavrianakis exposes the tensions

inherent in NGOs' engagement with the arms trade and argues for a re-examination of dominant assumptions about NGOs as global civil society actors. *Congressional Record* Routledge 2014 Reprint of 1894 Edition. Full facsimile of the original edition. The "Frontier Thesis" or "Turner Thesis," is the argument advanced by historian Frederick Jackson Turner in 1894 that

American democracy was formed by the American Frontier. He stressed the process-the moving frontier line-and the impact it had on pioneers going through the process. He also stressed consequences of a ostensibly limitless frontier and that American democracy and egalitarianism were the principle results. In Turner's thesis the American frontier established liberty by

releasing Americans from European mindsets and eroding old, dysfunctional customs. The frontier had no need for standing armies, established churches, aristocrats or nobles, nor for landed gentry who controlled most of the land and charged heavy rents. Frontier land was free for the taking. Turner first announced his thesis in a paper entitled "The Significance of the Frontier in

<p>American History," delivered to the American Historical Association in 1893 in Chicago. He won very wide acclaim among historians and intellectuals. Turner's emphasis on the importance of the frontier in shaping American character influenced the interpretation found in thousands of scholarly histories. By the time Turner died in 1932, 60% of the leading history</p>	<p>departments in the U.S. were teaching courses in frontier history along Turnerian lines. <i>Animals, Ethics and Trade</i> Springer Science &amp; Business Media Modern urban life cuts us off from direct connection with the animal world, yet daily the lives of millions of animals are affected by what we consume and wear and what we trade in. The use of animals for</p>	<p>food, labour and pleasure pursuits has long been justified with the assumption that unlike humans, animals aren't fully sentient beings. In recent years, however, science has revealed an astonishing array of complex animal behaviour, and scientists and policy makers now accept that the animals we make use of are indeed conscious, with preferences and</p>

intentions. The implications for our culture of factory farming, fast food and rainforest liquidation are staggering. In this powerful book, internationally renowned experts on animal behaviour and agriculture such as Jane Goodall, Tim Lang and Vandana Shiva are brought together with ethicists, religious scholars, international industry and regulators for the first time

to debate these critical issues and tackle the profound implications of animal sentience. The first sections discuss scientific and ethical perspectives on the consciousness, emotions and mental abilities of animals. Later sections address how human activities such as science, law, religion, farming, food production, trade, development and education respect or ignore

animals' sentience and welfare, and review the options for changes in our policies, our practices and our thinking. The result is nothing less than a stark and necessary look into the heart of humanity and the ethics that govern our animal powered society. *Technological Applications and Advancements in Service Science, Management, and Engineering* HarperCollins This book

addresses the role of law in the adaptive management of socio-ecological systems. Recent years have witnessed a rise in discussion over the relation between adaptivity and law, as if after decades of insouciance, legal scholars have finally started to understand the impacts of the scientific paradigm called 'adaptive management' on the legal sphere. Even though the

complicated relations between law and the adaptive management of socio-ecological systems have become more debated, a thorough examination of the scientific and theoretical fundamentals of such endeavours has yet to be presented. Using the illustrative example of European Union water governance and its path toward embracing adaptive management,

this book emphasises the legal significance of properly understanding the manner in which scientific knowledge of the environment is produced. Though always pivotal, rigorously apprehending science is especially crucial when dealing with the management of complex ecosystems as the 'normative' is created gradually before law begins to

examine the 'facts' of the matter. After examining the roots of adaptive management, this book argues that the legal needs to understand itself as an integral part of the process of the socio-ecological management of complex systems and not merely an external umpire resolving disputes. As a whole, the book offers new insights into the EU regulator's approaches to scientific

realities, making it an interesting read not only to academics and legal scholars but also to regulators striving to deepen their understanding or pondering which approach to adopt in the face of new regulatory challenges, and to scientists interested in the science and law aspects of their work. Purpose & Desire Wilfrid Laurier Univ. Press  
This book is a study of

earnings management, aimed at scholars and professionals in accounting, finance, economics, and law. The authors address research questions including: Why are earnings so important that firms feel compelled to manipulate them? What set of circumstances will induce earnings management? How will the interaction among management, boards of directors, investors,

<p>employees, suppliers, customers and regulators affect earnings management? How to design empirical research addressing earnings management? What are the limitations and strengths of current empirical models?</p> <p><b>Developmental Local Governance</b> John Wiley &amp; Sons</p> <p>The primary purpose of this edited collection is to evaluate critically the relationship between local</p>	<p>government and national economic development. It focuses on how the relationship between local government and development is structured, and the specific institutional arrangements at national and subnational levels that might facilitate local government's assumption of the role of development agent. In light of the contradictory outcomes of development and implied</p>	<p>experimentation with new modalities, post-development discourse provides a useful explanatory framework for the book. Schoburgh, Martin and Gatchair's central argument is that the pursuit of national development goals is given a sustainable foundation when development planning and strategies take into account elements that have the potential to</p>

determine the rate of social transformation . Their emphasis on localism establishes a clear link between local government and local economic development in the context of developing countries.

In the present text the

author deals with both conventional and new approaches to trade theory and policy, treating all important research topics in international economics and clarifying their mathematical intricacies.

The textbook is intended for undergraduates, graduates and researchers alike. It addresses undergraduate students with extremely clear language and illustrations,

making even the most complex trade models accessible. In the appendices, graduate students and researchers will find self-contained treatments in mathematical terms. The new edition has been thoroughly revised and updated to reflect the latest research on international trade. Challenges, Opportunities and Solutions in Structural Engineering and Construction

Francis-Noël Thomas and Mark Turner	present writing as an intellectual activity, not a passive application of verbal skills. In classic style, the motive is truth, the purpose is presentation, the reader and writer are intellectual equals, and the occasion is informal. This general style of presentation is at home everywhere, from business memos to personal letters and from magazine articles to student

essays. Everyone talks about style, but no one explains it. The authors of this book do; and in doing so, they provoke the reader to consider style, not as an elegant accessory of effective prose, but as its very heart. At a time when writing skills have virtually disappeared, what can be done? If only people learned the principles of verbal correctness, the essential rules, wouldn't

good prose simply fall into place? Thomas and Turner say no. Attending to rules of grammar, sense, and sentence structure will no more lead to effective prose than knowing the mechanics of a golf swing will lead to a hole-in-one. Furthermore, ten-step programs to better writing exacerbate the problem by failing to recognize, as Thomas and Turner point out, that there are many styles with

different standards. The book is divided into four parts. The first, "Principles of Classic Style," defines the style and contrasts it with a number of others. "The Museum" is a guided tour through examples of writing, both exquisite and execrable. "The Studio," new to this edition, presents a series of structured exercises. Finally, "Further Readings in Classic Prose" offers a list of

additional examples drawn from a range of times, places, and subjects. A companion website, classicprose.com, offers supplementary examples, exhibits, and commentary, and features a selection of pieces written by students in courses that used *Clear and Simple as the Truth* as a textbook. *Earnings Management* Routledge Services play a central role in the economies of nations and in global

commerce, and to some extent we are all in the field of service. Technological Applications and Advancements in Service Science, Management, and Engineering is a compendium of research that proves to be an indispensable resource for cutting-edge knowledge in service science understood as a broad research field that embodies all the aspects that relate to services, their

planning, design, operation, evaluation, and improvement. Perfect for academic researchers and practicing professionals, this volume serves as a vehicle for the development of service science and how good services are devised and engineered to get the maximum value for their efforts. **Taking Aim at the Arms Trade** Routledge Brings together leading

researchers from the USA and Europe to examine the literature on the new macroeconomics.

This book is the first to provide evidence-based experience to showcase how stakeholder management can be applied within social marketing programs, as well providing contemporary discussions of social marketing research. The

book aims to bring practitioners and academics together to address the calls made by scholars to address inherent challenges involved in identifying, involving and prioritising different stakeholders in social marketing interventions. Through sharing real-world experience, the text aims to extend and synthesise current knowledge in the field and contribute to

establishing stronger and long-lasting alliances with stakeholders involved in social marketing interventions with an aim of ensuring sustainable behavioural change. This book features a diverse series of case studies from different countries (including but not limited to Australia, Finland, India, Slovenia, the United Kingdom) conducted in various behaviour change contexts

(including alcohol consumption, nutrition intake, and breast feeding). Leading international social marketing and social science scholars provide case studies on stakeholder involvement in an intervention or multiple interventions and elucidate relevant lessons to inform theoretical as well as practical implications for multi-stakeholder social marketing interventions. This volume will be of interest to researchers, advanced students, practitioners and policy makers in social marketing and health policy. *Stakeholder Involvement in Social Marketing* Librairie Droz

A professor, biologist, and physiologist argues that modern Darwinism's materialist and mechanistic biases have led to a scientific dead end, unable to define what life is—and only an openness to the qualities of "purpose and desire" will move the field forward. Scott Turner contends. "To be scientists, we force ourselves into a Hobson's choice on the matter: accept intentionality and purposefulness as real attributes of life, which disqualifies you as a scientist; or become a scientist and dismiss life's distinctive quality from your thinking.

<p>I have come to believe that this choice actually stands in the way of our having a fully coherent theory of life." Growing research shows that life's most distinctive quality, shared by all living things, is purpose and desire: maintain homeostasis to sustain life. In Purpose and Desire, Turner draws on the work of</p>	<p>Claude Bernard, a contemporary of Darwin revered among physiologists as the founder of experimental medicine, to build on Bernard's "dangerous idea" of vitalism, which seeks to identify what makes "life" a unique phenomenon of nature. To further its quest to achieve a</p>	<p>fuller understanding of life, Turner argues, science must move beyond strictly accepted measures that consider only the mechanics of nature. A thoughtful appeal to widen our perspective of biology that is grounded in scientific evidence, Purpose and Desire helps us bridge the ideological evolutionary divide.</p>
