Jacob Böhme (1575–1624) has been recognized as one of the internationally most influential German authors of the Early Modern period. Even today, his writings continue to impact fields

as diverse as literature, philosophy, religion and art. Yet Böhme and his reception remain understudied. As a lay author, his works were often suppressed and circulated underground. Borrowing Böhme’s idea of “three worlds” or planes of existence, this volume traces the transmission of his thought through three stations: from his first underground readers in Central and Eastern Europe, to the Netherlands, where most of his writings were first

published, to Britain, where early translations made him a popular author for generations to come. Drawing on the work of both established and younger researchers from around the world, this volume charts new territory. It fills many lacunae and reveals a number of exciting discoveries, especially regarding the production and diffusion of manuscripts and previously overlooked sites of engagement. This book will be of interest to a wide range of scholars

interested in the development of philosophical, religious, literary and artistic thought from the 17th century to the present day.

In a time of climate change and mass extinction, how we garden matters more than ever: "An outstanding and deeply passionate book." —Marc Bekoff, author of *The Emotional Lives of Animals* Plenty of books tell home gardeners and

professional landscape designers how to garden sustainably, what plants to use, and what resources to explore. Yet few examine why our urban wildlife gardens matter so much—not just for ourselves, but for the larger human and animal communities. Our landscapes push aside wildlife and in turn diminish our genetically programmed love for wildness. How can we get ourselves back into balance through gardens, to speak life's language and learn from other

species? Benjamin Vogt addresses why we need a new garden ethic, and why we urgently need wildness in our daily lives—lives sequestered in buildings surrounded by monocultures of lawn and concrete that significantly harm our physical and mental health. He examines the psychological issues around climate change and mass extinction as a way to understand how we are short-circuiting our response to global crises, especially by not growing native plants in our

gardens. Simply put, environmentalism is not political; it's social justice for all species marginalized today and for those facing extinction tomorrow. By thinking deeply and honestly about our built landscapes, we can create a compassionate activism that connects us more profoundly to nature and to one another.

The prehistoric site of Le

Placard, Southwest France, was first explored 150 years. 19th-century excavations almost emptied the cavity, now surprisingly ill-known. This 150-year milestone grants an opportunity to look back at this exceptional site and what it can tell us about the Late Pleistocene hunting and gathering societies who dwelt there.

The first self-care book designed specifically for the early childhood field, Culturally Responsive Self-Care Practices for Early Childhood Educators

is filled with helpful strategies and tools that you can implement immediately. Recognizing that self-care is not one size fits all, the authors present culturally responsive strategies drawn from diverse early childhood staff working in a range of roles across communities and contexts. By tying the importance of educator self-care to goals of social justice and equity, this book advocates for increased awareness of the importance of self-care on both an individual

and institutional level. Through key research findings, effective strategies and personal anecdotes, this accessible guide helps readers understand and engage with the critical role self-care and wellness-oriented practices play in creating strong foundations for high quality early learning programs.

Based on the popular Artech House classic, *Digital Communication Systems Engineering with Software-Defined Radio*,

this book provides a practical approach to quickly learning the software-defined radio (SDR) concepts needed for work in the field. This up-to-date volume guides readers on how to quickly prototype wireless designs using SDR for real-world testing and experimentation. This book explores advanced wireless communication techniques such as OFDM, LTE, WLA, and hardware targeting. Readers will gain an understanding of the core concepts behind wireless hardware, such

as the radio frequency front-end, analog-to-digital and digital-to-analog converters, as well as various processing technologies. Moreover, this volume includes chapters on timing estimation, matched filtering, frame synchronization message decoding, and source coding. The orthogonal frequency division multiplexing is explained and details about HDL code generation and deployment are provided. The book concludes with coverage of the WLAN

toolbox with OFDM beacon reception and the LTE toolbox with downlink reception. Multiple case studies are provided throughout the book. Both MATLAB and Simulink source code are included to assist readers with their projects in the field. *Model Rules of Professional Conduct* Harper Collins
Vanadium is an essential element for humans and animals. The toxicity of vanadium at higher concentrations could be a global environmental concern and a significant

issue for both environmental protection and economic benefits. The relevance of anthropogenic vanadium in the environment has increased significantly in recent years due to an increased demand for vanadium in high-temperature industrial activities. This book summarizes vanadium's current research and explains its behavior and mobilization in the environment, especially in soils, sediments, water and plants. Through case studies from various

countries, it discusses critical limits set and risk assessment approaches and remediation approaches of vanadium-contaminated soils. FEATURES Provides a comprehensive overview of vanadium in the total environment Covers the role of vanadium in various environments such as soils, sediments, water and plants Includes bioavailability studies and further case studies from various countries around the world Focuses on a better understanding of biogeochemical processes

of vanadium Is written by international experts who present the current stage of the knowledge including innovative remediation and management approaches of vanadium-contaminated sites This book will be of use to upper-level undergraduate and graduate students taking courses in soil science, environmental science, soil ecology, water science, plant science, ecotoxicology, geology and geography as well as scientists, lecturers,

environmental and technical engineers, ecologists, applied ecological scientists and managers.

“Pollan keeps you turning the pages . . . cleareyed and assured.” —New York Times A #1 New York Times Bestseller, New York Times Book Review 10 Best Books of 2018, and New York Times Notable Book A brilliant and brave investigation

into the medical and scientific revolution taking place around psychedelic drugs--and the spellbinding story of his own life-changing psychedelic experiences. When Michael Pollan set out to research how LSD and psilocybin (the active ingredient in magic mushrooms) are being used to provide relief to people suffering from difficult-to-treat conditions such as depression, addiction and anxiety, he did not intend to write what is undoubtedly his most personal book. But

upon discovering how these remarkable substances are improving the lives not only of the mentally ill but also of healthy people coming to grips with the challenges of everyday life, he decided to explore the landscape of the mind in the first person as well as the third. Thus began a singular adventure into various altered states of consciousness, along with a dive deep into both the latest brain science and the thriving underground community of psychedelic therapists. Pollan sifts the

historical record to separate the truth about these mysterious drugs from the myths that have surrounded them since the 1960s, when a handful of psychedelic evangelists inadvertently catalyzed a powerful backlash against what was then a promising field of research. A unique and elegant blend of science, memoir, travel writing, history, and medicine, *How to Change Your Mind* is a triumph of participatory journalism. By turns dazzling and edifying, it is the gripping

account of a journey to an exciting and unexpected new frontier in our understanding of the mind, the self, and our place in the world. The true subject of Pollan's "mental travelogue" is not just psychedelic drugs but also the eternal puzzle of human consciousness and how, in a world that offers us both suffering and joy, we can do our best to be fully present and find meaning in our lives. By the time of his death in 1933 Henri Bremond, priest and member of the elite Academie francaise, had established himself in France, and increasingly in England and the United States, as a distinguished historian of Christian spirituality and as a Catholic modernist who helped to shake the church out of its dogmatic slumbers by embracing "pure love," artistic-poetic expression, and mystical prayer as the privileged manifestations of spiritual truth. Drawing on substantial new

scholarship in France, that has resuscitated and reinterpreted Bremond's work for our own times, and that sees Bremond as an important precursor of current trends in literary interpretation as well as spirituality, Gorday surveys the entirety of Bremond's corpus of writing, setting his work in its context of his personal struggles, as well as the wider setting of French historical and cultural development.

 'This long-awaited update to the acclaimed first edition is the definitive guide to a complex and intriguing family. The species accounts and taxonomic treatments have been fully revised in line with recent studies, and the all-new plates and photos complete this remarkable work. Highly recommended.' – Dominic Mitchell Beautiful, colourful, often fearless hunters of large insects and small vertebrates, shrikes are among the most admired of all avian

groups. The group is widespread (particularly in the Old World) with a large number of species, though many populations have plummeted in recent years, especially in Europe. This is a second edition of Norbert Lefranc's Shrikes, fully updated from its 1997 predecessor. The introductory texts have been significantly expanded and six new sections have been added in the species accounts: vagrancy, foraging behaviour, breeding success, population

trends, conservation and taxonomic notes. Special attention has been given to the latest developments in shrike systematics, not forgotten by the DNA revolution. The species accounts give information about the past and current distribution, along with threats and conservation status. Detailed and fully revised maps accompany the authoritative text, along with hundreds of high-quality photos showcasing racial and ageing differences as well as interesting aspects of

shrike behaviour. An exceptional new series of plates by Tim Worfolk have been created, with more individual plumages shown than in the previous edition. This beautiful book represents the definitive account of shrikes and their relationships, appearance, conservation and lifestyle; it will be treasured by birdwatchers and professional ornithologists alike.

Pilgrimage, Landscape, and Identity: Reconstructing Sacred Geographies in Norway explores the ritual geography of a pilgrimage system that arose around medieval saints in Norway, a country now being transformed by petroleum riches, neoliberalism, migration and global warming. What it means to be Norwegian and Christian in this changing context is constantly being renegotiated. The contemporary revival of

pilgrimage to the burial site of St. Olav at Nidaros Cathedral in Trondheim is one site where this negotiation takes place. St. Olav played a major role in the unification of regions of Norway into a nation united by Christian law and faith, though most contemporary pilgrims have only a passing interest in the historical background of the pilgrimage. The pilgrimage network comprises a wide variety of participants: individuals, casual groups, guided group pilgrimages,

activist pilgrims raising awareness for causes such as climate change and hospice services, as well as increasing numbers of local and foreign pilgrims of various ages, government officials, pilgrimage activists, and pilgrimage priests supplied by the Church of Norway (Lutheran). Part of the study focuses on the Olavsfest, a cultural and music festival that engages the heritage of St. Olav and the Church of Norway through theater, music, lectures, and

discussions, and theological and interreligious conversations. This festival offers an opportunity for creative and critical engagement with a difficult historical figure and his contested, violent heritage and constitutes one of the ways in which this pilgrimage network represents a critical Protestant tradition engaging a legacy through ritual creativity. This study maps how pilgrims, hosts, church officials, and government

officials participate in reshaping narratives of landscape, sacrality, and pilgrimage as a symbol of life journey, nation, identity, Christianity, and Protestant reflections on the durability of medieval Catholic saints.

Complete Guide to Prescription & Nonprescription Drugs 2018-2019 Artech House

This book's goal is to determine the significance of visual culture in the production

of contemporary poetry and to sound out the insights poetry might generate into contemporary visual culture. Its main hypothesis is that poetry holds considerable potential for (post-)digital language, image, and media criticism. The visual dimensions of recent poetry encompass, for instance, kinetic writing in digital poetry, visual elements in social media poems, and (spoken and written) text-image interactions in poetry films as well as in

book poetry. The articles examine these medial correlations and their political implications by asking how visual culture is applied, exposed, and debated in poetry. This volume brings together contributions by authors from various countries working in disciplines such as literary, media, and film studies, linguistics, cultural and visual culture studies, and in poetic practice. It covers poetry in English, German, Norwegian, Polish, Ukrainian, Russian, Serbian, and also

multilingual works. The book thus aims to promote international exchange between poetry researchers and stimulate further investigation into current relations between

poetry and visuality from additional research perspectives and languages.
